PRESIDENT'S MESSAGE

"Behavior is a mirror in which everyone displays [their] own image." — Johann Wolfgang von Goethe

 \mathbf{A}^s my third academic year as president gets underway, I am reminded of the rhythms of daily life on a college campus. They form patterns and shape months and years into cycles, some aspects of which eventually become predictable.

A few certainties associated with autumn at Willamette:

- The 11 horse-chestnut trees that line the walkway between Smullin and Collins will carpet-bomb unsuspecting students and faculty during passing time.
- It will become increasingly difficult for me to distinguish a third-year student at the College of Law from a junior faculty member at the College of Liberal Arts.
- Each day at dusk, the ritualistic, if indecipherable, chants of the Bearcat rugby team will reverberate off the brick walls of Smith and Waller until the team of two dozen players sounds more like 200.
- Where there are newly arrived students, there will also be the giddy dismay
 of newly acquired independence shared, no doubt, by departing parents.

It is, however, this state of anxious independence that will become an essential feature of each student's inner landscape. As they affiliate with the Willamette community, students begin to fashion new affiliations of mind and spirit as well, cultivating that terrain within. This process fosters debate, disagreement, diversity of opinion, and the open exchange of ideas — the essence of an independent university and fundamental to every democratic society.

Over time, each will acquire the capacity to think critically and objectively, to reject cant in favor of intellectual honesty and candor, to bring a deep historical perspective to problems and issues, to speak clearly and cogently, to write with grace and maturity, and to collaborate with others while maintaining intellectual independence and creativity.

Another Willamette certainty: Educational experiences of the highest caliber with committed, talented faculty will help students find their passions and live with purpose. This issue of The Scene invites you to explore just a few of them. Enjoy.

THE INBOX

Tufton Solution 6.0

Tufton hid on an injection-molded Hello Kitty toy in the spring issue, and you caught him once again. We've positioned him quite a bit more sneakily this time.

To the "Reminiscences Department"

During the Oregon governorship of Mark Hatfield '43, Antoinette Hatfield was our Alpha Phi chapter advisor. She pulled off quite a coup when she led Alpha Phi to pledge Dean of Women Regina Ewalt (see back cover, Summer 2013).

[Also,] Alpha Phi started in the president's house. On the back of our second-floor potty we had a sign — 'G. Herbert Sat Here'...

I can't forget when the fraternities would serenade. The loveliest was SAE.

"Our love is a river, deep and wide Flowing onward with the tide If we could drive on side by side Life would be sweet You are the girl God gave to me To love and worship tenderly..."

- Judy (Abele) Baker '61

Those Trees Talked!

The vast majority of our letters this time around resulted from last issue's "If Those Trees Could Talk" call for submissions. We got so many great romantic stories that we made a wholearticle out of them. Check p. 34.

More Coverage, Please

Some of us from the 1950s are still alive and active (as active as any 80-year-old can be). We still drive our cars, take vacations, contribute to things that interest us, go fishing and play golf. Why are we now just acknowledged in the obituaries? Please give us one more active decade, even five years would help.

I always enjoy receiving and reading. The Scene, but feel that after 80 we aren't of much importance. We still contribute our monies; we attend and support Willamette University athletics and activities. Broaden your scope!

- Jerry McNerney '55

We invite emails and letters to the editors. Gontact us at scene@willamette.edu, or by mailing to The Scene, Office of Alumni and Parent Relations, 900 State Street, Salem, OR 97301. Published correspondence may be edited for length and clarity.

DECEMBER 6, 1963

The Deatl

(Editor's Note: This feature article comes to the Collegian from Nancy Jane Duncan, former student of Williamette, now enrolled at Georgetown University She participated in the event surrounding the tragic death of the President, only read about.)

By NANCY JANE DUNCAN
"The President is dead. God, no
no, no, The President is dead."

Friday afternoon was as any other Friday in November - the cold,

"Some were so visibly shaken by
the news flashes that a student, yet
unaware of the events of the previous
minutes, on entering the Cat Cavern
at 11 a.m., saw terribly frightened
expressions and people whispering
in hushed voices, and immediately
concluded that the bomb had
been dropped."

The Collegian Dec. 6, 1963

The "bomb;" of course, was John F Kennedy's assassination, which took place 50 years ago this November. Cal McConnel, Willamette's chaplain at the time, observed appropriately that the event "sent the nation to its knees."

Within the first week, The Collegian had received a carefully crafted letter from Gary

Mansavage '63, who was in Washington, D.C. for those first haze-filled days after the event. He had taken photos of JFK and "John-John" just two weeks earlier at Arlington National Cemetery during Veteran's Day.

WU Grad Writ

Dear Editor:

The sound is that of muffled drums, ringing hoofbeats, and a rumbling caisson. A very strange yet awesome noise leaving one empty inside and at the same time searching for a means of expressing sorrow to fellow man. Such was the experience I encountered this day while mingling among the crowd viewing a solemn procession—a procession ultimately escorting a man to his final resting place.

EXACTLY two weeks earlier, I had witnessed this individual proudly smile from his place on a podium in the direction of his young son who sat in a front corner of the amphitheater. The date was Veterans Day and the place was Arlington Cemetery. I was one of those persons who hastened to the front of that famous open-air structure before formalities started in order to take a picture of the eminent figure on the platform. In so doing, I contemplated that these prints would be a source of even greater personal sentiment in future years. Only two weeks have past, yet the value of those photographs and my other first-hand observations of that man have increased in

YES, HE was a father as well as a leader. But where, I asked myself, did the unquestionable magnetic force of his personality lie? In order to answer this question today, one must confront those dignitaries who journeyed so far to

John F. Krunedy as he appeared on palgoing for the Democratic presidential

th of a President-- Washington Mourns Hear the drums. They are getting

are the silent people, standing in the gray rain. And it rains on and on and on.

I am driven to the white domed building. Oh God, the flag. It is the flag that tears my heart in two and makes it weep. It is the flag flying low in the gray rain that brings these bitter tears.

I walk through the high ceilinged rooms, past the cold marble statues and it almost seems as if nothing

now. We just can't." Someone played a radio – news and more news, "The line now extends forty-five blocks." Police warn newcomers that they might not get in. But no one leaves. Two couples laugh loudly, and talk of other things not of the Thing in all our hearts and souls. I hate them, "Don't you know? Don't you remember? This is not a picnic, or a date. This is the saddest night in the world, and even the stars are weeping. Yet you laugh hoarsely and hug your gulfriend.

Id, watch you with
not understand."

it is so cold. How in stand so many

mear. The building thrown against the very beautiful. But always see the flag cannot leave now. e white steps, I shall walk upward in deep

deep weeping. The

line narrows and police are posted doing the way. "Watch your step,

Shih . . . please be quiet. This is a time for only the night to speak. This is a time for only the shuffling of feet, the breathing of a million people (and perhaps the subbing of

old women).

The light is very bright after the darkness of tree-lined streets. We move faster and the wind blows harder. But no one leaves.

"Shih . . . please be quiet." A couple behind me talk of ordinary subjects. I want to remind them that this is not an ordinary time or an ordinary night.

We are almost to the steps. Will

we ever get there?

The people are not quiet as we climb the steps. A policeman at the door shouts loudly, "Hurry it up now." The smell of flowers is unnatural here - I will suffocate with the smell of death which is everywhere. The lights are too bright and the cameras flash, Instead of my heart kneeling in darkness to my dead God, I must walk quickly with the gawking crowds. I view the flag-draped coffin and I try to think of my young President lying stiffly in that small box and my heart breaks with the effort. I turn away and wipe my cheeks in the familiar gesture of these sad days. It is five o'clock and the line still stretches across the city of Washington and the cold grows colder-

but I am gone.

Morning - I wake up with the ancient sadness. Why am I sad? Oh yes. The President is dead. God, no . . . no . . . no. The President is

It is another clear cold day - the last day - then surely 1 will wake up. I do not believe. I do not believe. I do not believe. Hear the steady chanting of the drums. I hear them, but the day is too beautiful

We ride on bases to the cemetery I cannot forget seeing the people lined along the streets for miles, eyes following the bus, ears waiting for the sound of drums, Around the Lincoln Memorial, along the bridge, and covering the hillsides, the people wait to say goodbye. I have forgotten the ignorance and thought-lessness of last night. Today it is different.

I stand on a grassy hillside, trying not to see the open hole above me, trying not to see the rows of white crosses; seeing only the mag-nificent view of the city below, the tall monument, the capital dome far away against blue mist, the river, and the wide bridge - framed by the monument of the Great Emancipator. It was not so long ago that I stood there with many of these same thousands, in the great Givil.
Rights March. We were jubilant
then and walked proudly in the
warm sun, and we smiled. We are
not smiling today.

louder. Down the bridge below comes the procession. It is like a picture from an old history book, of the coronation of a king. Only a small dark hole mars the picture. Hear the music playing "Hail to the Chief". I shake my head in dishelief. This is not the funeral of my President. It cannot be.

But it was. Up the hill they came, to the mournful wail of hagpipes. The soldiers, the horses drawing the caisson . . no . . no . . not the flag-draped casket. I cannot bear to see the flag-draped casket again, It is so lonely, so small, so cold.

Up the hill they came. The riderless horse with an empty boot. Up the path to the grave. The wife and brothers. I stand and watch them in their courage and I do not have the courage to look longer. I bow my head in honor of their grief. The famous are here, as at the Civil Rights March. But again, this

is not a day for the famous. This is your day, Mr. President. This is your day, First Lady. We who stand here acknowledge and dedicate each passing moment in tribute to your strength and your gift to us. It is the least we can do.

Silver planes streaked across the sky. Cannons boomed and guns saluted. And the moment came when the humble people bowed with the kings and presidents; and the time came when the rich bowed with the poor - and together we heard the song of reveille, bringing the dawn of a new age, a new president -singing goodby to the beloved of all

It is over. The sky is streaked nations.

It will never be over. For the people come still, in the morning, in the night; leaving flowers, leaving with pink.

The President is dead. Yes, the President is dead. And the flag still flies low.

tes From DC

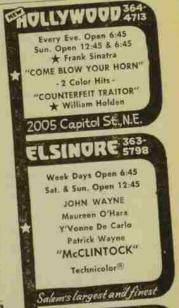

pay their respects, or one must endeavor to search the souls of those people seen weeping on the streets of the capital city. Perhaps the answer might lie within the men, women, and children who lined the blocks of this metropolis in the waning hours of the 24th and early hours of the 25th awaiting an opportunity to view the worldly remains of a man as physically represented by a flag draped casket. After talking with friends who had waited 7½ hours to enter the Capitol Rotunda, it was agreed that we were actually taking part in the outcome of a momentous crisis, but one, by the grace of God, that should never befall us again. Although this is the eve of a new day, may we be ever mindful of what has happened and its implications on every citizen.

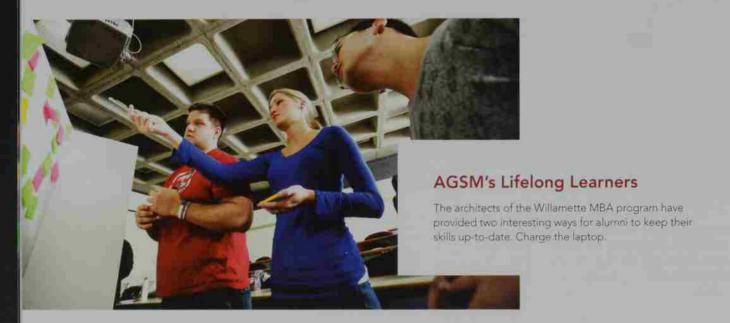

I HOPE my words do not appear to be written in an idealistic vein, nor is there any intent of expressing political partisanship. The impressions above have been formed while watching a city and its reaction to a tragedy - a tragedy even more meaningful to the people within its municipal boundaries because of a fellow inhabitant who represented, in theory, all Americans. Though in past times the populous of our federal core of government has been tainted by rough and selfcentered characteristics, it stood united this day in final tribute to not just a man, but a President.

Gary Mansavage.

MBA FOR LIFE: REAL COURSES, REAL GRADES

Over the summer, AGSM unveiled MBA for Life, a program that allows graduated students to re-enroll—free of tuition, though limited fees for books, etc., might apply—in full AGSM courses at either the Salem or Portland locations.

The idea is to enable working professionals to "update, refresh and recharge" their MBAs, as needed, for the rest of their lives.

The program requires alumni to commit to all the rules of regular students. Enrollees are expected to complete all coursework for grading (no casual auditing here), and grades are incorporated into students' existing GPAs.

Let's hear it for incentives.

ALUMNI BOOK CLUB:

NO, NOT HARRY POTTER

AGSM alumni remain eligible to join a popular alumni-only book club, launched in 2012, focusing on key industry works. Designed as a series of virtual sessions led by notable management authors, the book club asks readers to vote on reading options for the year (two in fall, two in spring) and join online discussions and conference calls with the author(s) at a later date.

Past books have included Lisa Bodell's "Kill the Company," which urges managers to rid their organizations of entrenched behaviors and processes before getting too excited about innovating; and Robert Pozen's "Extreme Productivity," which, as its title suggests, promises new organizational skills and tips for forming the right kinds of habits.

Be productive and learn more at willamette.edu/mba.

WE NEED YOUR HELP President Knopf's Cuneiform Tablets

Some readers will recall the story of President Carl Knopf (1941–42) and his missing cuneiform tablets. Others might be intrigued to hear of his tenure and trials.

Knopf served Willamette only briefly, leaving at the request of the Board of Trustees after what was, at times, a rocky presidency. Most notably, he created a stir for his stance as a conscientious objector at a time when most Americans were focused on World War II and Willamette sought to affirm Its public stance in favor of the war effort. He departed quietly and calmly, but under political strain and personal duress. He died shortly after, still a fairly young man. (For more, see The Scene, Spring 1991, available online at willamette.edu/scene/pdf/fall1991story.pdf)

Here, though, we ask for your help. Knopf was a world-renowned scholar and archaeologist, and rumors persist that he brought to Willamette several pieces of a cuneiform tablet collection dating from ancient times — only to have them go missing after his departure. The tablets have still not been found.

See answer key on page 45.

Do you, or anyone you know, have any information on their whereabouts? Ever heard any rumors? Had any hunches? If so, write us or email scene@willamette.edu. We, along with the folks at the archives and the Center for Ancient Studies and Archaeology, will be interested to hear from you.

Look for more on Knopf in a future edition of The Scene. (It gets even more interesting.)

ANDY PETERSEN HURLS PERFECT

Puget Sound Batsmen Fail To Dent First Safely; Play Again Today

Andy Petersen, nonchalant dark haired, loose-jointed mound star of Willamette university, made baseball history Wednesday when he pitched a perfect game, allowing no College of Puget Sound batsman to reach first base safely. Willamette won 4 to 0. It was the first home conference game for Willamette. The same teams will play again this afternoon at 3:30 on Olinger field.

Nobody hit. Nobody was safe on an error. Nobody walked. No-

Nobody hit. Nobody was safe on an error. Nobody walked, Nobody was hit by a pitched ball. Andy struck out 15 batsmen, Two balls were hit beyond the infield; one was a fairly easy out in right

PETERSEN, Pitcher

Willamette 1, Linfield 0

THE SCENE - WILLIAMETTE UNIVERSITY

By Brandon Chinn '14

PERFECTION, IN BASEBALL

is all but unattainable. A perfect game, in which a pitcher prevents even a single hitter from reaching base over the course of nine innings — 27 putouts in a row — is exceedingly rare: Since being founded 144 years ago, Major League Baseball has witnessed a mere 23 perfect games in roughly 390,000 games played.

With that in mind, it is notable that a teenage boy raised in McMinnville, Ore,, should throw a perfect game in college. But in the case of Andy Petersen '33, he didn't pitch just one perfect game while at Willamette — he pitched three. Eighty years later, he remains one of the greatest Bearcat athletes of all time.

'No-Hit Artist'

Referred to by The Collegian as a "nonchalant, dark-haired, loose-jointed mound star." Petersen pitched his way into the national spotlight when he threw his first perfect game as a sophomore on May 21, 1931. He struck out 15 batters, and only two balls were hit past the infield. Not only was this the first of three perfect games, but it was also the first perfect game at any level of baseball in five years. "He was a phenom, no question about it."

Andy's son, Larry Petersen, says. "He had a very strong arm and the natural ability to throw."

The elder Petersen continued to lead the Bearcats to exciting victories during the 1931 season. While pitching remained his specialty, he soon became known as an offensive threat as well. After hitting a grand slam in a 14-2 victory over Linfield College, Petersen put down Pacific University by

allowing only three hits on the mound and going 6-for-6 at the plate with a triple and two doubles. He finished first on the team in hitting that year with a dazzling batting average of 597.

What might have been most impressive about the young athlete was his ability to rise to the occasion when it mattered most. Against Whitman College in a best-of-three conference championship series, Petersen helped Willamette capture a narrow 2-1 victory in game one by pitching a complete game, allowing a single run while striking out 15. He backed himself up by hitting the game-winning home run late in the contest.

Whitman bounced back to win game two, but, after just a single day of rest, Petersen again took the mound for game three and pitched brilliantly, registering 17 strikeouts in nine innings while only surrendering a single run to help lead the Bearcats to a 3-1 win and the 1931 conference title.

Decisions

Word of Petersen's dominance was spreading. Not long after the conclusion of Willamette's 1931 championship season, the Detroit Tigers offered him a \$5,000 contract to leave school and play professionally. After mulling it over, he turned down the generous offer, deciding to instead return to Willamette and maintain his amateur status. "He felt strongly that a good education would take him further in life than a career in professional sports," Larry says.

He picked up in 1932 right where he left off the previous year. In an early-season victory against Oregon State Agricultural College (later Oregon State University), an amazing 23 of Petersen's outs in the 12-inning game were recorded via the strikeout.

Far left: baseball coverage from the 1932 Wallulah

Fer left inset, one of many Collegian snippets earned by Petersen

Below a few of the "Willamette University Hoopers" from The Collegian; Peterson is far left

(the Major League record for strikeouts in a game is 21). He followed up the next week with 18 strikeouts against the College of Puget Sound (later the University of Puget Sound) and also hit two home runs in the 6-5 win.

By the time his collegiate career was over, Petersen had tossed two more perfect games, and his accomplishments on the field went along with a multitude of student activities. Petersen was one of Willamette's starting five in basketball, and in 1932 he served as the junior class president, the president of his fraternity, and a member of the executive class council.

Bearcat baseball in 1931, from The Wallulah

He turned down the generous offer from the Detroit Tigers, deciding to instead return to Willamette and maintain his amateur status. "He felt strongly that a good education would take him further in life than a career in professional sports."

Japan Tour

Despite returning to Willamette, the three-time All-Northwest Conference pitcher was still regarded as a hot commodity in the baseball world. This appeared to be true not only at the professional level, but in the higher-level college ranks as well. The University of Hawaii, scheduled to visit Japan for a month-long tour, inquired about Petersen and was granted permission to take him on the trip.

Interestingly enough, it was with the bat that Petersen made his biggest impression. Playing in Meiji Jingu Stadium in Tokyo, he launched a home run to center field that traveled beyond the plaques marking the landing spots of balls hit by Yankee greats Babe Ruth and Lou Gehrig just a few weeks earlier. Petersen's family has always remembered his towering homer for its symbolic value. Larry still recalls the sense of pride: "I thought one of the best things to come from the whole trip was that he hit the ball farther than they had."

Professional Career

Petersen departed Willamette after the 1932 season and received five different offers to play professionally. He decided to join the New York Yankees and underwent spring training with the team, playing with Ruth, Gehng, and several other eventual first-ballot Hall of Famers.

At the time, Petersen would not have understood the gravity of the experience the way people do today. "It's phenomenal looking back," Larry says. "But, based on what I'd seen him do in the later years and what I'd heard from his friends, it wasn't too surprising."

A combination of arm injuries and homesickness, however — combined, probably, with a desire to be with his girlfriend — motivated Petersen to leave the Yankees after just a few months. He returned to Oregon and was a major contributor on the mound for the Portland Beavers Triple-A club in 1934, and he retired from baseball in 1935. He led a quiet life until passing away in 1984.

Hall of Fame

This fall, 81 years after his departure from Willamette, Petersen will be inducted into the Willamette Athletic Hall of Fame. The recognition is about his undeniable prowess on the field, but it is also about the legacy he leaves behind: "This induction would have made him very proud and it makes the entire family very proud," Larry says.

Petersen was inducted into the NAIA District 2-Hall of Fame in 1965 (Willamette joined the NCAA Division III in 1998). He joined McMinnville High School's Hall of Fame in 2007.

"It is an honor for us to recognize Andy and his marvelous career," Willamette Athletic Director Dave Rigsby '00 says. "His dominance on the baseball field is unlikely to ever be matched. He's one of those quietly successful Bearcats over the years whose time has certainly come."

People who know the story would agree that Andy Petersen was a true superstar, one of the best pure athletes of his time. On the mound he was utterly commanding, and at the plate he was explosive. What separates him from others the most, though, is his rare relationship with athletic perfection. When he is finally inducted into the Willamette Hall of Fame this fall, it will be a fitting ending to a thrilling, occasionally perfect, athletic story.

news and notes

BEARCATS

Willamette Hires New Golf Head Coach

The Bearcat golf teams will be led by new Head Coach Patrick Daugherty in

2013-14. Daugherty was hired as the head coach of both teams after serving as the assistant men's and women's golf coach at Willamette over the past three seasons.

"I'm extremely excited," Daugherty says. "We have been building a foundation for both our men's and women's golf programs for the last three years and I think this year we will really see the impact of that."

2013 Athletic Hall of Fame Inductees Selected

The Willamette University Athletic Hall of Fame will induct its class of 2013 on Saturday, Oct. 19 at the Salem Conference Center Activities will begin with a social hour at 6 p.m., with the banquet and induction ceremony starting at 7 p.m.

Willamette's Hall of Fame class of 2013 includes six athletes, two teams, a coach and one individual selected for meritorious service.

Athletes

Gayle (Roth) Cutaia '86: swimming, track and field, cross country

Brian Greer '00, MAT'03: football

Matt Kosderka '98 baseball

Andy Petersen '33: baseball

Brandi Row Lazzarini '96: volleyball

Liz (Heaston) Thompson '99 soccer and football

Teams and Others

1974–75 men's basketball team 1995 volleyball team

Steve Prothero: former men's and women's head golf coach

Gery Ellibee 73: athlete, coach and Bearcat fan for meritorious service

Individuals interested in attending the reception and dinner should contact Kelli Snyder at ksnyder@willamette.edu. Reservations also can be made by emailing athleticstickets@willamette.edu. The cost is \$75 per person. Tables also are available.

Edwards Earns Second Team Academic All-America Honors

Willamette runner Theresa Edwards '13 was chosen Second Team Capital One Academic All-America by the College Sports Information Directors of America (CoSIDA). She was named First Team Academic All-District in 2011–12 and 2012–13.

She graduated this spring with a double major in environmental science and biology, and a 3.97 GPA. A member of Phi Beta Kappa academic honor society, she was chosen as a co-winner of the Jean Williams Award in 2012–13 as the Bearcats' top senior women's athlete based on athletics, academics and leadership.

Edwards ran at the NCAA Championships in cross country in 2010, 2011 and 2012. She competed at the NCAA Outdoor Track and Field Championships in the 1,500-meter run in 2012 and took 18th. She won Northwest Conference individual titles in the 800-meter run and the 1,500-meter run in 2012.

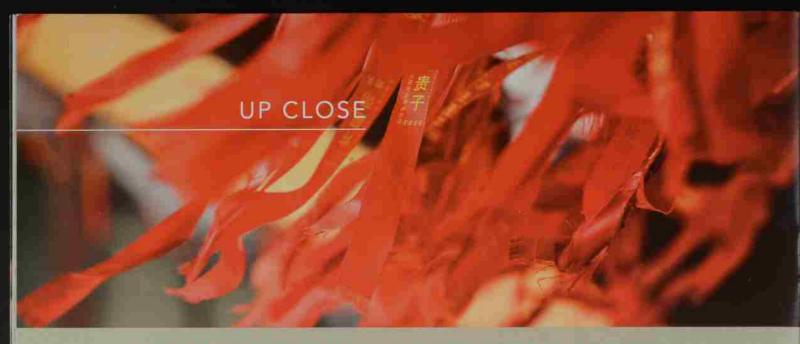

Renovation Completed at Ted Ogdahl Field and Charles Bowles Track

There's a fresh look at McCulloch Stadium following the resurfacing of Ted Ogdahl Field, home of Bearcat football, and the Charles Bowles Track this summer. The \$1 million project was completed in August, just in time for the football and cross country seasons.

Both facilities are state of the art. The new FieldTurf synthetic surface for football includes cardinal-colored end zones and a Bearcat paw print at midfield. The updated Charles Bowles Track features a Beynon surface. A key element of the track resurfacing was an expansion of the jumps and pole-vault areas.

For complete news coverage, remember to check willamette.edu/athletics.

THE CHINA ADVOCACY INSTITUTE IN WORDS AND PICTURES

Story by Catherine Jarmin Miller '99 Photos by Frank Miller

Spring (Wei) Chunni wondered this as we walked the enormous, concrete-scaped grounds of Xi'an's

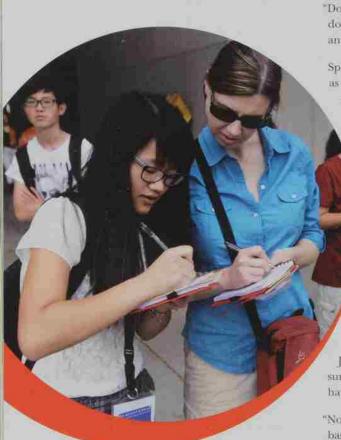

> Famen Temple, Chunni is one of 40 Chinese students participating in the Advocacy Institute, an interdisciplinary

Willamette post-session taught abroad and funded by a grant — the largest programming grant in Willamette's history — to facilitate citizenship and cultural understanding.

British Parliamentary
Debate and sustainability are
complementary themes of the
institute, now situated at Xi'an
Jiaotong University. It was my pleasure, as a WU alumna, to see firsthand how it worked.

"No," I replied to Chunni. With her basic knowledge of English and my non-existent Mandarin, I tried to explain that there are all kinds of students, including partiers. "I was very serious," I replied, hoping that my infamous award for Most Studious would resonate. I also attempted, not too successfully, to explain why it took me seven years to complete my college education and how, when I finally transferred to Willamette, I blossomed.

For this year's program, environmental studies professors Joe Bowersox and Scott Pike guided American and Chinese students through complex discussions about environmental and cultural sustainability. Participants learned the rules and intricacies of debate, courtesy of Dean of Campus Life David Douglass, professor Una Kimokeo-Goes '03, "The Intern" Bill Newell '13, and Ting Ting Huang of the International Debate Education Association's Beijing office. Along the way, every participant dealt with the challenges of communication, cultural difference and divergent approaches to complex questions. They argued in English for and against statements like, "The Chinese government should include the degradation or improvement of ecosystems in the calculation of its GDP."

The author (right) on location in 2013

"We [Chinese students] seek a
Western-style education," says Judy
(Ji) Tingting. She shared with me
the fact that students in China often
learn by memorization, with the
ultimate goal of passing exams.
The lifelong-learning skills of critical
and analytical thinking are, to her,
distinctly Western.

She, like most children in China, has taken a course in English and chosen an English name. In addition to Spring and Judy, other institute participants included Mango, Hathaway, Willma, Bella, Zoe, Zoy, Charlotte, Leslie, Lucy, Kevin, Arthur, Robert, Elaine, Emma, Hazel, Stephanie, Martina, and even Cinderella, who is now pursuing graduate studies in intercultural communication in Philadelphia.

They were quick to reach out to me, helping me avoid being run over by cars, holding umbrellas over my head to shield me from the sun, hailing cabs, and sharing refreshingly candid opinions about anything and everything — including their own government.

I was astonished, for example, to find that several had siblings in violation of the one-child policy — thanks to the happy surprise of twins or key government connections (or paying fines). Elsewhere I learned that they love American sitcoms. They are also fans of "Downton Abbey" and "House of Cards." They are open, kind, generous, thoughtful, honest and generally happy.

In my first experience abroad, a Willamette post-session in Italy — as well as subsequent travels to India, Cambodia and beyond — I learned that familiarity is comfortable. In China, I found myself pleased by the many things I had in common with

the students. I often start out my travels seeking the exotic and the new only to find myself noticing the similarities as well as the differences.

My Chinese friends reinforced this lesson, and the Advocacy Institute helped us understand ourselves and each other.

At the celebratory banquet concluding the visit, students wept, holding onto each other, saddened by the thought of parting. In challenging and accepting each other, they've bonded. I left feeling that perhaps they were, for the first time — and that I was, once again — blessed by the Willamette experience.

A DECADE IN THE MAKING

Hallie Ford Museum of Art Unveils Landmark "Breath of Heaven, Breath of Earth" Exhibit

When John Olbrantz was hired to direct the Hallie Ford Museum of Art in 1998, he couldn't let himself dream too big.

There was no money to launch a grand exhibition, let alone hire the staff he needed.

But that didn't stop him from pursuing what he felt the museum could and should be. The facility is housed in a former telephone company building that was bought and remodeled with \$3.5 million in grants - \$2 million of which was gifted by the Ford Family Foundation. Using connections throughout the U.S. and a \$1 million endowment fund established by Hallie Ford in 2004, Olbrantz and Willamette faculty curators have launched several notable exhibitions over the years that have featured everything from classical and Egyptian art to Maori weaving and Renaissance drawings.

The newest exhibition, "Breath of Heaven, Breath of Earth," has personal significance for Olbrantz. On Aug. 31, a decade after Olbrantz began visualizing the project, "Breath of Heaven, Breath of Earth" opened to introduce patrons to objects that date back to the beginning of recorded history.

It's dedicated to his best friend, Jim Romano, an art curator who died in a car crash in 2003.

The two organized an Egyptian exhibition at the Hallie Ford Museum of Art in 2002 but never had the opportunity to showcase their planned second exhibition of ancient Near Eastern art.

Great Expectations

The exhibition was assembled through loans from more than 20 notable institutions, including the Metropolitan Museum of Art and the Brooklyn Museum. All artifacts originated from the Fertile Crescent region of the Middle East and date from 6000 BCE to 500 BCE.

"These cultures gave Western civilization the concepts of cities, schools, writing and the alphabet," Olbrantz says, "We owe a tremendous debt to the civilizations of the Near East."

The exhibition ties together the divine, human and animal realms — uniting the region's diverse cultures.

"Every culture has their own gods and goddesses, kings and queens, warriors and hunters," Olbrantz says, "Every culture has animals, whether they're supernatural, mythical or real,"

But finding pieces that represented each culture proved to be an almost

Male figure; Iraq, excavated from the Nintu Temple, Level VI at Khafaje, Mid-to-Late Early Dynastic Period, 2700–2500 BCE; alabaster, shell, and lapis lazuli; H. 9 in. (23 cm), W: 3 1/8 in. (8 cm), D: 2 3/4 in. (7 cm); University of Pennsylvania Museum of Anthropology, and Archaeology, Joint Baghdad School/University Museum Expedition to Mesopotamia, 1937, 37-15-28. Photo: Penn Museum image no. 152346.

impossible challenge, Olbrantz says, Alongside Trudy Kawami, director of research at the Arthur M. Sackler Foundation, he spent six years meeting and talking with curators on the East Coast to identify what objects were needed for the exhibition and to research where such objects were located:

The result is a wide range of pieces, from the head of Gudea, one of the carliest examples of royal portraiture, to a relief from Ninevelt depicting a battle scene.

There's a 10-inch-tall figure of a Sumerian priest worshipper and a glazed ceramic lion from ancient Nuzi in Mesopotamia, on loan from the University of Pennsylvania.

"It has been challenging, frustrating and immensely rewarding," Olbrantz says about assembling the show. "You'd have to travel thousands of miles to see an exhibition of this caliber."

Transporting such valuable pieces of art can be a complicated and tense process. It's not enough to trust the tracking or handling of a private shipping company; many pieces arrive in the hands of private couriers.

VISIT THE EXHIBITION

"Breath of Heaven, Breath of Earth" is on display Aug. 31-Dec. 22 at the Hallie Ford Museum of Art, 700 State St., Salem OR.

Hours: Tuesday-Saturday, 10 a.m.-5 p.m., and Sunday, 1-5 p.m.

CAMPUS CONVERSATIONS

MARY MCROBINSON University Archivist

In a newly renovated space above the Hatfield Library (still with its "new archives smell"), Mary McRobinson and her small staff tend to the remnants of this place's history. All the documents and artifacts, many of which are all but forgotten beyond the library's walls, show us the arc of the Willamette story and help us reconstruct the lives of the leaders who have shaped the university and the State of Oregon.

The Scene has already showcased a letter from Joseph Stalin to a worldly alumnus (see Fall 2010), but there are plenty of other gems. McRobinson makes sure that students, faculty and independent researchers know where to find them.

What challenges you in this job?

Surprisingly enough, one of the primary challenges we face today is how to manage and preserve content that is born digitally — video, audio files, email and enormous amounts of documentation. This is because so many technologies are becoming obsolete so fast. Nobody's computer can read floppy discs anymore; laptops rarely have CD drives nowadays. We struggle to capture and maintain data in ways that will make sense in the future.

Other media are challenging, too. Take video tape. Smm and 16mm films are super robust — if they're kept in good condition, they'll last decades. VHS tapes were inherently unstable, though, and a lot of people took old film and transferred it to VHS thinking it would be easier to use. It was, but it deteriorates rapidly.

You've been here a while. Why and how does one become a university archivist?

I wanted to do my master's in history but knew I didn't want to get a PhD and teach, so Llooked to archival work — I think of it as working with history on

One of the primary challenges we face today is how to manage and preserve content that is born digitally — video, audio files, email and enormous amounts of documentation.

the back end. We make "history in the raw" available to the researchers and historians. In my early work I built up pretty extensive experience with political collections, which helped me once I came to Willamette since so much of our history relates to Oregon and national politics.

What do you like best about the job?

I have one of the best jobs on campus. I like that I get to do a huge variety of things. I love working with people, so I love donor relations — I've gotten to meet some of the most fascinating people as they've thought about donating their collections. I really enjoy working with Willamette classes and community groups, too.

Students are often surprised by the archives. Doing research with primary source materials is completely different than working with secondary materials, and they have fun when we open these up to them. They get to extract the ideas directly instead of having someone else process them: it's empowering in that way.

What's the wackiest or most impressive artifact you've come across?

Our collections are so diverse that it's impossible to pick a favorite. For me a single artifact is more interesting when there are related materials and context provided, which allow me to learn the story that goes with the item or to do some sleuthing.

One of our political collections contains a statue of a shiny black seal balancing a gold dollar sign on its nose. From the base to the tip of the dollar sign, the statue stands just shy of five feet tall. The undergraduates, in particular, love this artifact. As we understand it, the statue is meant to symbolize a balanced budget.

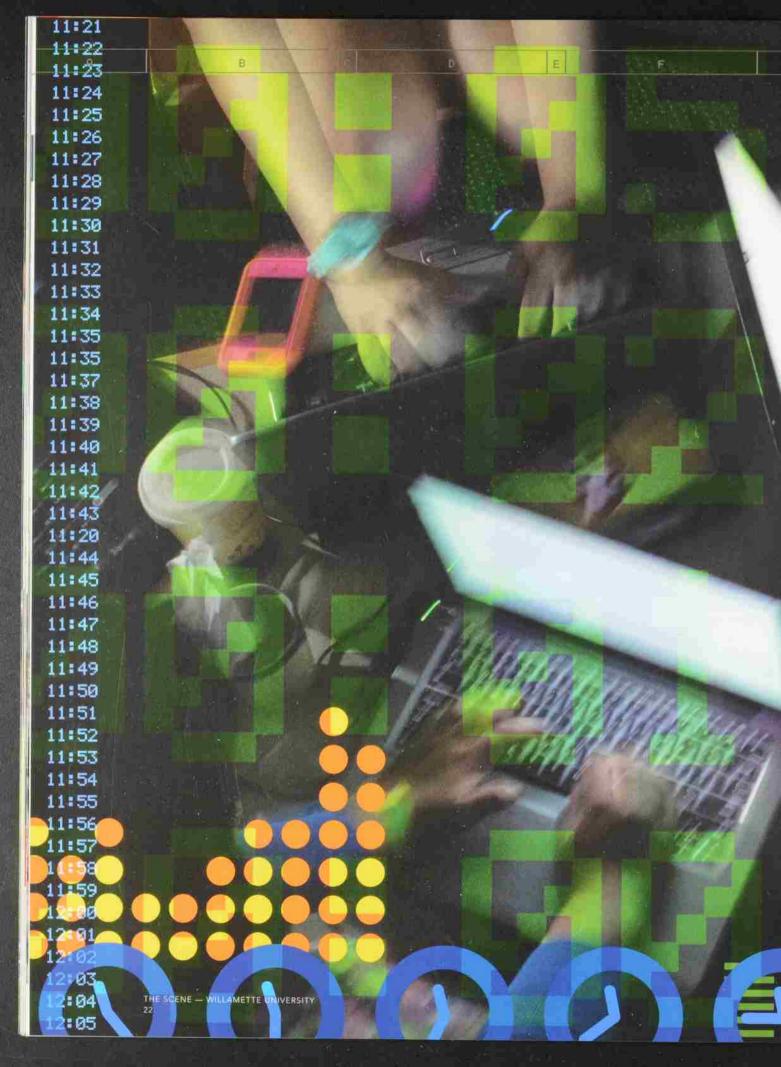

Is there a type of record or material you wish WU had been better about keeping over the years?

In general, it would be nice to have more of the early history documented. The 1919 Waller Hall fire hurt us because a lot of records were destroyed. We know that administrative files and other materials were lost at that point.

We have President Whitaker's records from 1891 – 93, but those are about the earliest presidential records we have. One thing that's so interesting — and challenging — is that the function of the president's office has changed so dramatically over time and from president to president. We can glean some information from year-books and bulletins and catalogs, but

it's limited.

One example is that, early on, if you were a new student and you pulled into town, one of the first things you'd do is go see the president and he'd find you a place to live. I use this with current students to illustrate one of the ways Willamette has changed. I ask them, 'How many of you dropped in on President Thorsett for a house rental when you showed up?' They enjoy that.

It's almost noon in Southern California, and the sun shines unfiltered in an empty

sky. This is a prototypical Californian spring day: To the east, the San Gabriel Mountains have warmed under a few hours' light; to the west, the Pacific sparkles. Poolside, here, at a large conference hotel, a handful of Willamette economics majors are lying on their stomachs and trying not to think about numbers for a while.

They're tired, but they can't stay long. They have exactly 20 minutes to rest, and then they have to towel off, trot back upstairs to a darkened suite strewn with laptops and charger cords and deflated bags of potato chips, and make a significant business decision.

and international relations.

in international business

These upperclassmen, alongside peers from around the U.S. and a handful of other countries, are here for one warm spring weekend in Anaheim to attend the annual finale of the International Collegiate Business Strategy Competition (ICBSC). The culmination of a semester's work, the event revolves around a business simulation that pits students against a sophisticated computer model, the market, and 28 teams of competitors. The competition's directors are private-sector veterans and longtime academics, several of whom have been around since the simulation's inception in 1965.

The six Willamette students are a high-functioning team. They are computer whizzes, effective public speakers, economic forecasters and analysts; they are also jokesters, beachgoers and friends.

But, unlike everyone else at the competition, they're not business students.

Willamette is the only school involved that has no undergraduate business program. (There are just two other liberal arts colleges, and both have business as a cornerstone of their undergraduate curricula.) It's been that way for some time, too, but Willamette, in the role of the pintsized underdog, has been consistently strong and occasionally dominant. The Bearcats won everything most recently in 2012, besting undergraduate business programs that important people consider pipelines for Wharton, the University of Chicago, Columbia Business School, and others. Over the years they've filled a wooden display case in Smullin Hall with enough engraved crystal trophies to weigh down a wheelbarrow.

And so, as the Willamette Six — Jamel Freeman '13, Neal Rusk '13, Josh Dean '14, Paul Shoji '14, Eva Sharf '13 and Tana Watanahe '14 — file up to their hotel room, sunbaked, they are propelled by precedent. Maybe they can feel the weight of it.

RULES OF ENGAGEMENT

The ICBSC is a complex simulation, but the key ideas are intuitive enough-(no need to go into Altman-Z scores or ROI averages). The Willamette students comprise one of 29 teams. They, like everyone, have created a hypothetical company. Theirs is called Refresh Technologies and manufactures personal, portable water filters. Willamette competes in a "world" with five of the other teams' companies; all the rest have their own worlds and their own products. though everyone is judged together on their overall performance for the most coveted awards at the end of the weekend.

Every student has a real job title and real responsibilities, and they've been learning them for a semester, during which they've interacted with the simulation from a distance. For each simulated (accelerated) fiscal quarter, the teams have to submit to the ICBSC directors a "decision" — this vocabulary will show up often — that includes changes to resource allocation, production levels, marketing expenses, pricing and other factors. Throughout the semester, each team has had two

weeks to make each quarter decision. Here in Anaheim, they have two hours.

The water-filter market has proven to be crowded, and Refresh Technologies' performance has been disappointingly average so far in the contest.

The group members' first step now, in the hotel room, is to refresh their emails to read the results from the last decision they made, and then they'll settle in to assess what's next.

The news is shocking. Not only is the outlook poor (Refresh Technologies is slipping into a segment of the market it shouldn't be in), but there is also an announcement from the simulation directors that a make-believe tsunami will soon strike the group's foreign production site, rendering useless several new production lines they had, just hours earlier, begun to build there. They really needed those extra lines.

There are some crinkled facial expressions around the room, and choice words directed toward laptops. Even the sense of confusion — nobody said anything about natural disasters.

Then, as if a switch has been flipped, the students regroup. Their voices join in a dense conversation and ideas for responding come and go rapidly. Sometimes members affirm an idea right away and run with it; other times, a thought is met with the brief, shared silence that says, "Um, no." Anyone within earshot of the conversation can tell, even if its content is mostly technical jargon, that this is an interesting team dynamic.

The clock ticks its way toward the next simulation deadline, which, presumably, will require much more brainstorming than normal, consensus, and a drastic change in approach.

O There is one hour.

PRECEDENTS

The 2013 team members, one could say, are the curricular descendants of a man named Richard "Dick" Gillis, Gillis came to Willamette in 1957 and would serve the economics department for three decades, earning a legacy akin to that of Richard "Buzz" Yocom or Frances Chapple or Bob Hawkinson. Gillis was the original faculty advisor for the simulation program that would evolve into the ICBSC.

THE CLOCK TICKS ITS WAY TOWARD THE NEXT SIMULATION DEADLINE.

Former students remember his sense of humor, but they also recall shrinking in their chairs at the thought of being called on. "He always seemed to be having fun teaching," says Jim Booth '64, another Willamette leading man, "even though it was frightening to those in the class who weren't prepared, you took the risk of being embarrassed." Booth added a second major, in economics, after taking a class from Gillis.

Gillis's expectations were uniformly high, as applied to his students and to himself, and he helped inform not just the character of his department but the worldview of the university. Evidence is everywhere: After Dale Mortensen '61 received the Nobel Prize for Economics in 2010, he recalled Gillis's influence as a close and perceptive mentor. Current students, even, receive a scholarship that carries Gillis's name because donors have wanted to contribute to the old professor's cause. His cause was his students above all else.

(It's worth pointing out that this writer was able to attend the 2013 ICBSC competition because of the Gillis fund.)

With Gillis's departure in 1989, the reins of the business-simulation program went to professor Don Negri, then a junior member of the faculty. He has tended it since. Looking at the program with new eyes, Negri discerned that its alumni had begun to mature into their professional lives and had become especially successful. These were

some of Willamette's highestpowered graduates, and their successes had never really been tracked or trumpeted outside the department.

The alumni continue to be united by a powerful shared experience. Shobi Dahl '06, co-founder and CEO of Dave's Killer Bread, remembers the experience as one of the best of his Willamette career.

"What I loved about it was that Dongot us all pointed in the right direction and then just let us go and figure it out for ourselves," he says. "We really built up a lot of teamwork, and it was very formative for us."

For his team, the competition was an exercise in adaptation and coping with setbacks.

"One round, our computer somehow submitted a blank file to the game operators, and when the next round started we all flipped out thinking that the operators had sent us a curveball in that round because our plants had not produced any bottled air (our company name was Breathe).

"Once we figured out it was just us, we all got angry for a minute, sad for a couple more, and then we pulled ourselves together and kept charging forward."

Amazingly, Dahl's team ended up taking second place in the competition, slip-up and all.

lared Rieger '09 lives in New York and works in investment banking. He, too, recalls the experience as one of the best of his Willamette career, and he says the group work - and the intensity - gave him professional momentum.

"We relied on each other's expertise," he says. "It had to be very collaborative. It was the first time I had done anything business or finance-related. too - I had never looked at financial statements before the project, and now I do that every day. The competition made everything real and practical."

Ashleigh Williams '06, MBA'06 has made her way from investment analysis to buying and pricing for several large dot-coms. She summarizes the experience in practical terms:

To this day, I follow the guys from the simulation course much more closely than other alumni because they're all doing interesting things."

Even Rusk, not yet graduated. received three competing job offers before Anaheim. Using alumni contacts, he identified three viable career tracks and might start by helping insurance companies manage their risk. He is confident, modest and grateful.

He certainly isn't alone. Quietly, over the years, Negri has siphoned off the top prospects in each economics cohort and helped produce leaders. While every team is different and each year the simulation program evolves a little, one thing has been constant: Willamette's companies routinely fight above their weight. Interestingly, another corner of Willamette provides clues as to why.

People who study team theory know that high-functioning groups succeed because of their composition and their relationships. They tend to have diverse skills, and they tend to interact well enough to share them. It's deceptively tricky, however, to build a good team on the front end.

Larry Eitner, professor of management practice at the Atkinson Graduate School of Management and manager of its experiential PACE program (see The Scene, Spring 2011), knows how. "One thing we know in team theory," he says, "is that if we know the various psychometric skill sets of the members, we can balance a team to make it more productive."

He says that by using formal assessments (the Meyers-Briggs is one well-known example, but managers use others), leaders can combine diverse-butcomplementary personalities and aptitudes. An excellent team doesn't require sameness among its members; it requires the right kind of difference.

So here's one possibility already: Even though all the members of Willamette's

REPEAT

WILLEMETTE US.

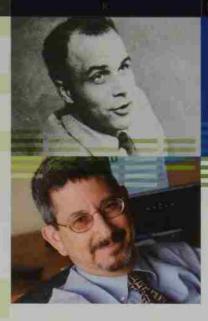

SCHOOLS WITH UNDERGRADUATE teams are declared economics majors, their success could stem from the fact that they are likely to be more "productively different" than other groups. Consider the built-in variety of this year's team: A politics minor with a hankering for entrepreneurship. A varsity quarterback headed for teaching and coaching. A psychology double-major who studies human behavior. A mathematician headed for an MBA. A pragmatist who studied in Spain. A student of Japanese with international-relations savvy.

One of the other leading teams at this year's competition is from Regent's College in London, but it isn't comprised of Londoners. In fact, five nationalities are represented among the six group members. Its CEO, Mikael Sletten, is from Norway and understands that the group's composition is its asset.

"This has been an intercultural experience," he says, "We know how to work as a team with different backgrounds, and we're very attuned to our cultural differences. We feel the fatigue sometimes, but it helps us."

Because of the limited number of eligible students each year. Negri starts with the ones with the best grades and encourages them to self-select into team roles. But he doesn't just ask them to sign up for whatever they want: They have to complete a test first.

It involves a visit to Negri's house. The students are charged with planning and cooking a large dinner for themselves and Negri's family, and Negri gives them precious little direction. They have to brainstorm, plan and execute on a ticking clock (and with their own appetites in mind). It's quirky, but in some way it approximates the sorting that takes place in more formal selection processes. The students learn how to communicate; they

settle into roles based on aptitude rather than aspiration; they learn to trust each other's expertise because they have to. They learn, not accidentally, how to make collective decisions very quickly.

DECISIONS

Back at the hotel in Anaheim, the students are dealing with the tsunami. It threatens everything: the assembly lines, the several fiscal quarters worth of decisions they've made to lay the groundwork for expansion, and, when it comes down to it, the future of their company.

But now another message arrives. Due to some unforeseen system error, it says, the tsunami has now been canceled. Left: Economics professor Richard "Dick" Gillis came to Willamette in 1957. Professor **Don Negri** picked up the simulation where Gillis left off.

"Tell me they're not into it,"

In the span of a couple more they run projections of investments and revenue. They hit "send" inside the last minute. There are sighs of relief.

No matter what, this decision won't save the competition for them — they're too far behind by now — but it does give them a useful boost at the end, something to remember the weekend by. "If we leave here with nothing else," Sharf says, smiling, "it'll be that we can make a complicated decision together in 18 minutes." It's a point not to be underestimated.

Negri, prohibited from being present during the decision-making periods (so he doesn't influence the group), now comes into the room. He surveys the scene, understands immediately what has just taken place, and smiles, as he tends to, at this relentless team,

"Tell me they're not into it," he says, tickled. There are grins all around.

> Outside, the sun is going down somewhere over the ocean. There won't be any time for a dinner break because the tsunami glitch had

required that an extra decision round be shoehorned into the evening's schedule. It's time, again, for Refresh Technologies to collect itself and move on.

O There are two hours. O

THE TSUNAMI HAS BEEN CANCELED.

Immediately, Sharf, the big-picture person, wonders out loud about ways to turn this into a positive — to help her team bounce back from the confusion quicker than everyone else.

There are 18 minutes left until another decision is due. During two of those minutes, they decide whether or not to continue building the new production lines (they do).

Voice to the Voiceless

KYLIE PINE '06

and the

UNTOLD STORIES

of the

OREGON STATE HOSPITAL

BY SARAH EVANS

Kylie Pine '06 will never forget her first glimpse of the Gold Room

Located in the basement of the Oregon State Hospital's former administration building, the room — about the size of a Willamette classroom — was crammed full of wicker wheelchairs, desks, cabinets, chairs of many shapes and sizes, sewing machines, medical equipment, and cardboard boxes containing who knows what.

"There was as much stuff as they could possibly fit in, with these little aisles carved out, sometimes precariously," Pine remembers. "It was a mess. And it wasn't gold at all. No one knows why it had that name."

The 2 000 items squeezed inside represented more than a century of history for an institution that, despite its notable role in the film "One Flew Over the Cuckoo's Nest" and its prominent place as the state's public psychiatric institution, remained a mystery to many Oregonians.

October 2012 - a permanent place to tell the forgotten stories of those who had lived and worked at the hospital. and a space to talk freely about issues that might otherwise be taboo. How society deals with mental illness, for example, or how it makes peace with a history of treatment practices that today might seem misguided or cruel.

Pine saw the Gold Room as an opportunity. She'd faced similar challenges before, both in her job as collections

manager at the local heritage center and in her days as a Willamette student aspiring to museum work. Plus, the project hit right at the center of what makes history so fascinating to her.

"I'm really interested in the physical remnants of what we leave behind," she says. "Instead of just reading about history and going through historians' stories, I'm more interested in the physical, tangible portion of things."

FROM STUDENT TO CURATOR

Her entire life, Pine hasn't moved too far on the map. She grew up in Salem near Bush's Pasture Park, went to Willamette for a degree in American studies, and got her first post-graduation job across 12th Street at what was then the Mission Mill Museum (today's Willamette Heritage Center at The Mill).

The 28-year-old prefers to travel back through time, Inspired by her great-grandmother's stories about growing up in Oregon, Pine developed an early passion for local history that led her to volunteer as a tecnager at Mission Mill.

When it came time for college, Pine's reasons for choosing Willamette were imconventional, but they made perfect sense to her. "I may have fallen a little bit more in love with the history of the school than the school itself," she says. There's a really good tie in between the early history in this area and the school, so it seemed like a good place to apply."

Above: Pine stands in front of a wallsized photo of an Below: portion of the Gold Room

Willamette also held a solid spot in Pine's own family history. Her grandparents — Robert '50 and Doris (Walser) O'Neill '50 — met at the university. Several decades later, so did her parents — Richard '82, MBA'82 and Debra (O'Neill) Pine MBA'82.

Pine turned her captivation with Willamette's past into a central part of her studies. For one class project, she researched and documented the origins of items in the Hallie Ford Museum of Art's Native American collection.

"The context she has provided to the native collection enriches the experience of native community members who want to access our collection now and for generations in the future," says anthropology professor Rebecca Dobkins, who was Pine's advisor.

Pine also interned at the museum, where she catalogued items and registered new domaions — a job she continued for several months after graduation while the museum awaited the arrival of a new collection curator, Jonathan Bucci.

"If she hadn't been doing it, the museum either wouldn't have been able to continue collecting during that time, or things would have been a mess when I arrived," Bucci says. "She's always very professional, thorough and efficient. Her understanding of history helps her do her job better."

About a week before Pine graduated, Mission Mill offered her a job as volunteer coordinator. With the exception of heading to the University of Washington for two years to earn a master's in museology, she has worked across the street in various capacities ever since.

Her current position as collections manager means she's in charge of 28 volunteers working to make sure the 230,000-plus items in the heritage center's collection — all focused on the Marion County area and donated by the public — are catalogued and can be accessed when needed.

"We've got about 50 years of backlog that we're working on cataloguing, plus people are bringing in new things every day," she says.

As if her work at the heritage center didn't keep her busy enough, Pine also took on a volunteer position in 2009 to create an inventory of items collected through the years at the Oregon State Hospital.

One room in particular awaited her attention.

*KIND OF LIKE ARCHAEOLOGY

The Oregon State Hospital opened in 1883 with 370 patients who traveled by train to Salem from a private facility in Portland. After peaking at 3,545 patients in the late 1950s, the hospital's population steadily declined to today's number of about 600.

In the 1970s, Oregon passed a law requiring that all historic properties be inventoried and managed by the state. At the state hospital, employees started saving things they thought might be important someday, storing them in the Gold Room and other places around the campus.

With the 2000 closing of Salem's Fairview Training Center, a facility for people with developmental disabilities, staff members brought that institution's stored property to the state hospital and dumped it in the Gold Room. The same thing happened when the Eastern Oregon Training Center closed in 2009.

The room became a mishmash of items from multiple locations, some listed on incomplete inventories, but most untracked and unlabeled.

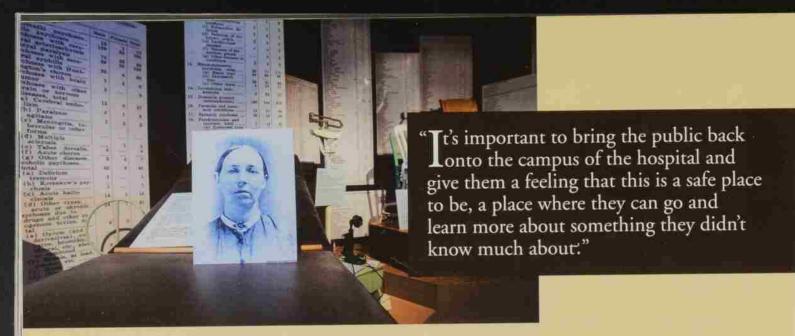

What's This Artifact?

Despite the tireless sleuthing of Kylie Pine and other volunteers, the identity and origin of numerous Oregon State Hospital artifacts remain a mystery. Here are two examples.

Do you recognize them or have any ideas about how or where they might have been used? Contact the Oregon State Hospital Museum of Mental Health at ashmuseum@gmail.com; 971-599-1674, or by mail at P.O. Box 851, Salem, OR 97301.

ITEM 1 (left) This 3.1/2-inch-long item labeled with a curious set of letters and numbers appears to be part of a medical device. It was the 100th item that volunteers catalogued in the hospital's Gold Room in 2009.

ITEM 2 (right) This 10-inch-high electric lamp-like object, also from the Gold Room, has a slot on top that could have been used to insert slides for projection. However, the device contains no other mechanisms for holding slides in place.

Above a patient and perhaps a life, all but forgotten over the years

When Pine came along, her first task was to number the artifacts and creare one massive inventory. "We tried to note if they were listed on past inventories to find clues to where the materials originated or how they were used," she says. "It was kind of like archaeology down there."

Some of the items had obvious purposes, but others - particularly outdated medical equipment - were more mysterious. Even with simpler artifacts like bottles of medicine or scales. Pine wasn't always sure how or why they were used.

She and other volunteers spent countless hours searching for information online. They used a federal patent and trademark database to match num-

bers printed on the items with their potential uses. They looked for names of companies that manufactured the pieces to

learn date ranges of when they might have been created. Pine kept a blog, posting pictures of items and asking if the public knew anything about them.

As they researched, several Salemites who had helped put the hospital campus on the National Register of Historic Places were working toward a new goal: a museum to highlight the artifacts and the stories behind them. The state was in the process of replacing the old hospital buildings, which had been declared dangerous and dilapidated, with a new, stateof-the-art facility. But as the former institution was razed, museum organizers wanted to preserve and share

"It's important to bring the public back onto the campus of the hospital and give them a feeling that this is a safe place to be, a place where they can go and learn more about something they didn't know much about." says Hazel Patron, president of the museum board.

We also want to educate folks about mental illness and the stigma that surrounds it, and about the different forms of treatment over the years and how we've come to where we are now."

Pine's experience and degree in museology made her a natural fit

"Kylic wrote our exhibit plan," Patton says. "We fleshed it out and some things changed, but the basic plan is Kylie's. She's very creative, so her plan had some extremely innovative aspects to it."

NO LONGER FORGOTTEN

Museum visitors encounter one of Pine's ideas immediately after paying their entry fee. Each receives a badge identifying a patient or staff member whose story is on display somewhere in the museum. Like a treasure hunt, visitors can search for that person as they peruse the exhibits. It's the first of many ways Pine tried to personalize the experience for visitors, while simultaneously bringing attention to the stories of people who might otherwise have been forgotten.

"You can't find a person today who hasn't been touched somehow by issues of mental health or addiction," Pine says. "They are affected, or their family or someone else they know is affected. The idea of trying to combat the stigma of that and find a place to talk about it is powerful.

Left, strap of a strait jacket, for better or worse the symbol of an era; and vials of oils and chemicals, presumably for treating various ailments

"We're also giving voice to someone who may not be remembered in other contexts in history. Museums are a way to legitimize a person's experiences, history and background."

To the right of the museum's entry is the section Pine coordinated: exhibits about why people came to the hospital and what types of treatment they received. Until the 1950s, most patients — including some as young as 4 — were committed voluntarily or through civil commitments, where someone brought complaints against them and asked that a judge commit them to public care after a doctor's exam.

Museum visitors examining the large posters listing "causes of insanity" for patients from the late 1800s will find many familiar "ailments": business trouble, childbirth, disappointment in love, menopause, overwork, worry, old age. Today's hospital residents, in contrast, are only adults who have been found guilty of a crime except for insanity, or those who a court rules dangerous to themselves or others or unable to provide for their own basic needs.

Sprinkled amidst the chairs, desks and beds on display are small placards detailing patients' stories. Finding these stories was as difficult as identifying the artifacts in the Gold Room, Pine says.

She started by examining early hospital admission ledgers located in the Oregon State Archives (she had to limit her search to public records because of privacy issues). She scoured the ledgers for unique names and people who had an interesting reason for commitment. Then she searched other public records that might shed light on those patients' lives. She looked through census records, military records, newspaper articles from the patients' hometowns. Hours and hours of searching often ended with no information.

But her endless sleuthing also yielded intriguing — and sometimes heart-breaking — stories. Like Mary, a Native American patient from the 1880s who "talk[ed] incoherently in broken English and Jargon" — her language was likely Chinook Jargon, and she was discharged after seven months when doctors concluded she was not insane. Or Robert W.B. Riggle, sent to the hospital in 1920 after being "gassed in the war." He committed suicide after only three months.

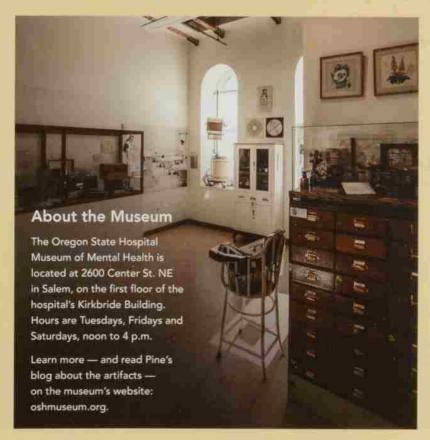

Pine also researched displays on former treatment methods. Visitors can learn about everything from shock treatment to restraint and seclusion to lobotomies to cosmotherapy, "where you go and get a facial and get your hair done and you feel better," Pine says.

"A lot of the hype that's gone around about the hospital has been negative, about the horrible conditions, which is true, but it's a place where worthwhile things happened, too," Pine says, "We'd like to encourage a more balanced discussion. I would like the museum to be a place where people come and talk about what happened to them, and to start some dialogues about how we can change and improve the system that's in place."

What started for Pine as an excavation of the mysterious Gold-Room evolved into a new passion and mission; educating the public about an issue that impacts everyone.

And with her thoughtfulness and care for the task, she gained some unintended pupils as well.

"She's taught us what it means to be a curator of these artifacts," Patton says, "We look at these wonderful artifacts with different eyes as we realize how truly important they are, not just to tell our story now, but to preserve that story for the next generation." •

If Those Trees Could Talk Reader Responses

We received many more responses to last issue's call for Willamette sweetheart stories than expected. Here are a few, edited for length and clarity given space constraints. You can read plenty more online at willamette.edu/scene.

Remarkably, the submissions span 70 graduation years — from 1942 to 2012. A romantic tradition indeed!

Right: "Pinning" was commonplace at Willamette for many years. Fratemity men in serious relationships with sorority women would give their chapter pin to their pattner as a sign of dedication and, in many cases, intent to marry. The pin on this page (shown actual size) is from Sigma Chi and belongs to Jim Booth '64.

NEW CALL FOR SUBMISSIONS!

How did Willamette change your life?

Was it a professor? A sports team? A group of friends? We're compiling alumni stories just like we did for the tales of Willamette romance you see above. We'd love to include yours. Email submissions of 500 words or fewer to scene@willamette.edu, or mail them in. We might reprint them in a future issue.

Delores (Netz) Nunn '42 and Warne Nunn '41

My husband and I were students in the late '30s and early '40s and were well ahead of the time of the Star Trees

He was a year ahead of me, but after
I came to WU we became an
item. We were even pinned
and then engaged the year
after he graduated. He
went to work for the Farm
Security Administration, a
federal agency, until he enlist-

ed in the Army Air Corps in 1942.
After I graduated I spent a year at the University of Oregon Medical School, now known as OHSU, in training for a career in medical technology — which I enjoyed for many years. We were married in 1943 and I moved to Texas to be with him at the base where he was stationed. There, I had my first job as a medical technician in the laboratory in the base hospital.

After the war ended in 1945 we came back to Salem with our little Texan baby girl, and he began his career in state government. He joined Secretary of State Mark Hatfield '43 as his executive assistant and stayed with him in that same role for the eight years Hatfield was governor. He went with Sen. Hatfield to Washington, D.C., but came back in a few months saying "it's no place for a country boy ..."

Warne served on the Willamette Board of Trustees for many years and spent several as chairman of the board. Willamette was near and dear to his heart. In 1982 he became one of the first five trustees of the Meyer Memorial Charitable Trust, which grew out of the estate of Fred Meyer.

Our son, Robert Nunn '72, graduated from WU and became a trustee in 1991, serving as chair of the endowment committee for many years. His daughter, Hayley Nunn MBA'09, earned her MBA at Willamette, so we're a Willamette family.

Although Warne and I did not get to have the pleasure of stealing some kisses under the Star Trees, our years at WU were a lovely experience and a great preparation for our future careers. Thank you, Willamette.

Patsy (Older) Benson '52 and Don Benson '52

Yes, those trees have seen a lot of romance! But what about Waller Hall — especially the cupola?

It was 1949, spring. It was time to find a date for the Delta Gamma dance, and the freshman class president was Don Benson. I called the Phi Delt house and got him on the phone; I asked him to the dance. He said, "Just a minute." I waited, and he returned to the phone and said he would love to go.

Much later he told me that he didn't know who I was when I called and that he had to ask someone. Luckily, he was told that I was the cute redhead in his biology class.

We went to the dance and he helped me clean up, as I was on the clean-up committee. We spent many times kissing under the trees, on the step of Waller Hall, in Waller Hall and of course in the cupola of Waller Hall. We married in 1953 and had such fun for 57 years. Don died in 2011 but I still have fun remembering.

Mary (Reeh) Empey '56 and Donald Empey '54

We met at the Welcome Freshmen Sock Hop held the first weekend Mary was on the campus. She was a freshman and I a junior. I was there with friends to check out the new girls.

By the end of the evening, we were spending a lot of time dancing together. I asked Mary if I could escort her back to Lausanne Hall. We took the long way home, walking through the park next to the State Capitol Building. We talked a great deal that night, and while we did not date seriously for some time, we both knew we had met someone special. Our first date was to a WU football game. Later that semester, Lasked Mary to the Phi Delta Theta house dance and she reciprocated by asking me to the Pi Beta Phi formal. We began to see more of one another, and on Valentine's Day, when Mary was a sophomore and I a senior, I gave her my fraternity pin as a symbol that we

were engaged to be engaged. Mary still has the pin and wears it on occasion.

We both were teachers in the Salem schools before moving to Bend, Ore., where I began my career as a school administrator and we started our family. In 1991 I was awarded the Willamette Distinguished Alumni Citation for achievement in education.

We feel so fortunate to have attended Willamette. Not only did we receive a very fine education, but we met one another and established friendships that have lasted a lifetime. Some of our greatest joys over the years have been visits with classmates, attending class reunions and returning to the campus on occasion. We love each other and we love Willamette UI

Marvin Case '65 and Anne (Kaufman) Case '64

She was the most beautiful woman I had ever seen.

It was 1961 and I was a freshman at Willamette. I had not picked a major yet, but I took piano lessons and spent lots of time in the Willamette music building. She was from Salem and a piano major. We met in a small practice room in the basement. Practice rooms had very small windows. I could see her in there. I bravely entered the room and introduced myself. Looking back, I have no idea where I got the nerve to do that.

We dated for a few months. We walked the Mill Stream. We had picnics. Things went well. She was a Pi Phi and I a GDL But then she decided to date others, so she dumped me. I dated others, too, but it was not enjoyable.

Then came the Columbus Day storm. I called her home to make sure she

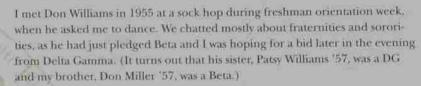

was alright. She thanked me for worrying about her.

We got back together. I eventually majored in political science, graduating in 1965. We were married that summer ...

One reason I have lived a successful life is because my wife, now of 48 years, believed in me. Her confidence in me led to more achievement in life than I could have ever had accomplished alone.

We are now 70 years old. We have lived through life's many changes. She is still beautiful. And we still play the piano.

Carolyn (Miller) Williams '59 and Don Williams '59

All through our freshman year and into our sophomore year, I encouraged my friends to invite Don to various dances (but I was always interested in someone else!). "He's a great guy," I'd say, "You'll have a fun time."

Then came Glee our sophomore year, and we found ourselves placed next to each other in formation. Being side-by-side at 6 a.m., noon, 4 p.m. and 7

Don had to take four girls out for coffee friend performand kiss them all goodnight — all in one hour. I was number four ...

p.m. for a week, we became pretty good friends. On Friday night before the performance, when final Glee bets were being made, Don asked if I'd help him pay off a bet if our class lost — a pretty good bet in itself as the class of '59 was

well known for being just good enough not to finish last! And the bet was with Bob Taylor '58, whose class was well known for finishing first.

On Blue Monday, the time came to pay off the bet. Don had to take four girls out for coffee and kiss them all goodnight — all in one hour. I was number four, and by that time the car hop at the A&W was used to seeing Don with a different girl as he ordered "the usual" every 15 minutes.

That week spent together, and a goodnight kiss on the front porch of the DG house, led to a date a few months later and the rest, as they say, is history. We just celebrated our 52nd wedding anniversary.

Ben Bryant '09 and Stephanie Wong '09

During our sophomore year at Willamette, Stephanie was conducting an experimental study on the effects of caffeine as part of a course on human physiology. While not part of the class, I was asked by two good friends of mine to be a test subject. At the time, I did not know their third lab partner (Stephanie), and I dreaded the first day of the study because I didn't like coffee.

Then, suddenly, my feelings about participating changed as Stephanie entered the room. She was quiet, but had the most lovable and kind demeanor. She also walked around with a distinct bounce in her step that symbolized her happy-go-lucky attitude. From that point onward, I always looked forward to my weekly grande latte served by Stephanie even if it had to be followed by a battery of tests!

Laura (Steege) Manthey '71 and George Manthey '71

October 1967. Freshman year. Weekly dinner exchange between female and male freshmen dorms.

There were two freshman girls' dorms and two boys' at opposite ends of the campus. On Sundays we'd do exchanges where half the girls from a dorm would switch with half the boys in a dorm. On Oct. 8, 1967, half the Doney girls went to Matthews. There, I met George for the first time, though I had heard about him and was told I'd like him. Back in those days there were limited and strict rules about the mixing of sexes, so it was a rather big deal to go to these dinners.

We met in the entry. We thought our food in the girls' dorms was pretty bad, but the dinner in the boys' dorms was worse and the manners distinctly lacking. I remember one guy in particular who wolfed down a remarkable quantity of mashed potatoes, never once closing his mouth.

By the time we were seniors and married and living in a little house on Broadway, campus life had changed considerably. And for the better, I might add.

We just celebrated our 43rd anniversary.

Madeleine (Chapman) Cushman '12 and Colin Cushman '12

Colin and I both participated in Jump Start freshman orientation programs; he was in Steppin' Out and I was in NSOCO. We met briefly during a whirlwind introduction session between groups. However, we officially met one another in our College Colloquium class.

Honestly, I thought he was really weird, but it didn't take long for him to change my mind. By October of freshman year, he had stolen my heart with a little enthusiasm (and skill) when he played one of the pianos in my residence hall. Lee House. I was gone, falling hard within minutes. As I was in the mindset that I did not want to date at all my freshman year, I fought hard against our

relationship. But I was too in love with him, and he was too perfect for me. From the very beginning. our friends referred to us as "Madi and Colin" without ever separating the two (even during our few months separated!). It was clear to me by the end of the first year: I

A year later, we were engaged and another year later we were married. Thank you, Willamette, for bringing us together so early in our college careers; you shaped our experience and the rest of our lives.

Kevin Zerzan '89, MAT'90 and Karen (Erskine) Zerzan '90, MAT'91

Karen Erskine was a Pi Phi and also a Delt Princess. I was a new Delta Tau Delta pledge and soon to be a member. I was sitting in the Delt dining area on a sunny fall day when I looked outside and saw the most beautiful woman I had ever seen walk into our fraternity.

It was like everything was in slow motion as the wind blew through her hair and the sunlight sparkled around her. I believe I heard the music and lyrics to "Dream Weaver" as she walked in. I had never experienced a feeling like that before, so I quickly ran through the shared kitchen between DTD and Matthews (or was it Belknap?) and hid in their dining area. Later that fall, my roommate, Rick Harder '91, set the two of us up on a date and we went to our Halloween function together. Three months later we were engaged. We were married in Cone Chapel in 1990. have three wonderful children, and have been happily married ever since.

Charles Zerzan '48 and Joan (Kathan) Zerzan '48

(As told by Kevin and Karen Zerzan)

Joan Kathan was an Alpha Chi and Charles Zerzan was a Phi Delt after World War II. There was some reason why they had to go up into the dark attic in Waller Hall. Joan was a country girl from Rogue River, Ore., on a music scholarship, and Charles had just returned from Burma, where he was a captain in charge of an anti-aircraft unit. Joan was very impressed by this "world-ly" (her words) man and pretended to be scared as they ascended

the stairs into the dark attic so that he would hold her hand.

After Charles graduated, he left to attend medical school at Marquette University in Milwaukee, Wis. Joan left Willamette one term before graduation to marry and be with Charles. In their 60 years of marriage, they had 12 children, 33 grandchildren and many greatgrandchildren.

Jesse Freeby '83 and Rose (Zerzan) Freeby '83, JD'87

I was off campus at a birthday party with my Hawaiian brothers. We were ... studying. This girl caught my eye and I was watching her. She backed into me, said "excuse me," and then she walked away. I did research — I found out it was her 19th birthday and the party was for her. I also found out that she had just changed her housing and had moved upstairs from me in my dorm. Belknap. (What were the chances? She was my new neighbor — clearly a welcome was in order!)

I made sure I was in the car that night on the ride back to campus. Although we were all securely seat-belted and facing forward safely — as all vehicle passengers should be — if there was a shortage of seatbelts, I might have made sure that she was sitting on my lap for the ride back and that I was the seatbelt.

Then I made sure every day thereafter to go upstairs, stand in her doorway and ask her, "Do you want to play cribbage?" I pretended I did not hear her say, "Go away and quit bothering me," "I don't know how to play cribbage" and "I am studying; why aren't you?"

Bull. Weish's other given name was Waste Agidlishin
and she was of the Stoux tible. Coverage in The
Collegian at the time gamered national interest and
produced senous stress for the sociology major, who
"abhorized the publicity." 6: 1893. 7: 1971. 8. To
request that squirels on Williamette's campus and at
Willson Park be declared an endangered species.
9. That athletes should continue smoking organities
during training. The article was titled, "Ye Athlete and
My Lady Nicotine." 10. Play in a college football game.

Cause ...

Scholarships funded by generous alumni made it possible for me to attend Willamette. I graduated not only with a wonderful education, but also with the sense of service and giving back that is a hallmark of the Willamette experience. Monthly giving is a way for me to help make that same opportunity possible for other students. - CHRISTINE NEWKIRK '05

When we heard that Willamette was making a strong move into sustainable community education, we were inspired to offer our support. We feel that sustainability education will help to inform the way we all think about the future of our planet. We are happy to give to Willamette to support the kind of global perspective it provides to deserving students who will go on to make a difference in our communities. — ED '71 AND JOANNE ELLIS

We believe in giving to the Parents Fund as a way to express our gratitude for and belief in Willamette. This is a transformational time for our daughter. She has blossomed as a student and a responsible young woman during her years at Willamette, We want to help the university give her, and other students, the best opportunities to grow in an enriching academic — JON AND KATHERINE LAUER environment.

— JUN AND KATHERINE LAUER

To me, donor support is an expression of kindness, pride in the institution, belief in educational equity, and hope for younger generations. It is a reflection and hope for younger generations. It is a reflection of the impact that Willamette had on individuals who value their education enough to endorse who value their education enough to endorse who are in the position they were once in themselves. Scholarships help prevent a tremendous themselves. Scholarships help prevent a tremendous financial burden for my family. I hope to one day be in a financial position in which I can also donate.

Because of the opportunities I have had at Willamette to learn more about sustainability, I have been able to lead my own workshop and project on sustainability. I have worked with passionate sustainability. I have worked with passionate students and inspiring faculty and am learning students and inspiring faculty and am learning what it means to be a 'global citizen.' Thanks to this experience, I am looking into a career in to this experience, I am looking into a career in environmental consulting after I graduate.

I am grateful for the numerous opportunities that have been provided for me, my friends, and my teammates by generous donations from our parents.

Their support has allowed for improvements all their support has allowed for improvements all over campus, ranging from dorm upgrades to an increase in student activities to improved athletic increase. Parent support gives all of us the chance to further enrich our time at Willamette and create to further enrich our time at Willamette and create meaningful and lasting memories.

BEHIND THE SCENES: IMAGES OF THE PAST

Do you remember these photographs? Recall some of these people? If so, we'd like to know. Send your recollections or comments to scene@willamette.edu or call 503-375-5304. We'll incorporate your feedback into the university's records. We'll also share what we learn in a future edition of The Scene.

Want more photos? View many more images of the past — and comment on them — by visiting library.willamette.edu/archives. Click on "Browse Digital Collections" and start commenting. Archives would love your input.

Spring 2013 Reader Responses

Barbara (Woodworth) Saigo '64 was first to recognize the photo of the men with the butterfly nets. "It shows my classmates Joe McClure '64, Bob Mattson '64 and Bill Webber '64 chasing Joan 'Tiny' (Douglas) Andersen '63"... She was, truly, a diminutive person, plus she had a very fun personality, which helped to make the humor of the photo because at that time we all knew each other at WU. It was 'all in the family.' As in other majors, those of us in biology were pretty good friends, studied hard and had fun." Mike Durrell '64 and Dennis Drew '64 corroborated.

Tom Toombs '64 and Jim Booth '64 wrote that one of the net-carrying men could have been Jerry Juve '65. Bob Mattson '64 suspected that Joe McClure '64 and Ron Fahl '64 were actually the other men of action.

Steven Rapf '70 spotted professor Frances Chapple in the classroom shot. Chapple corroborated.
