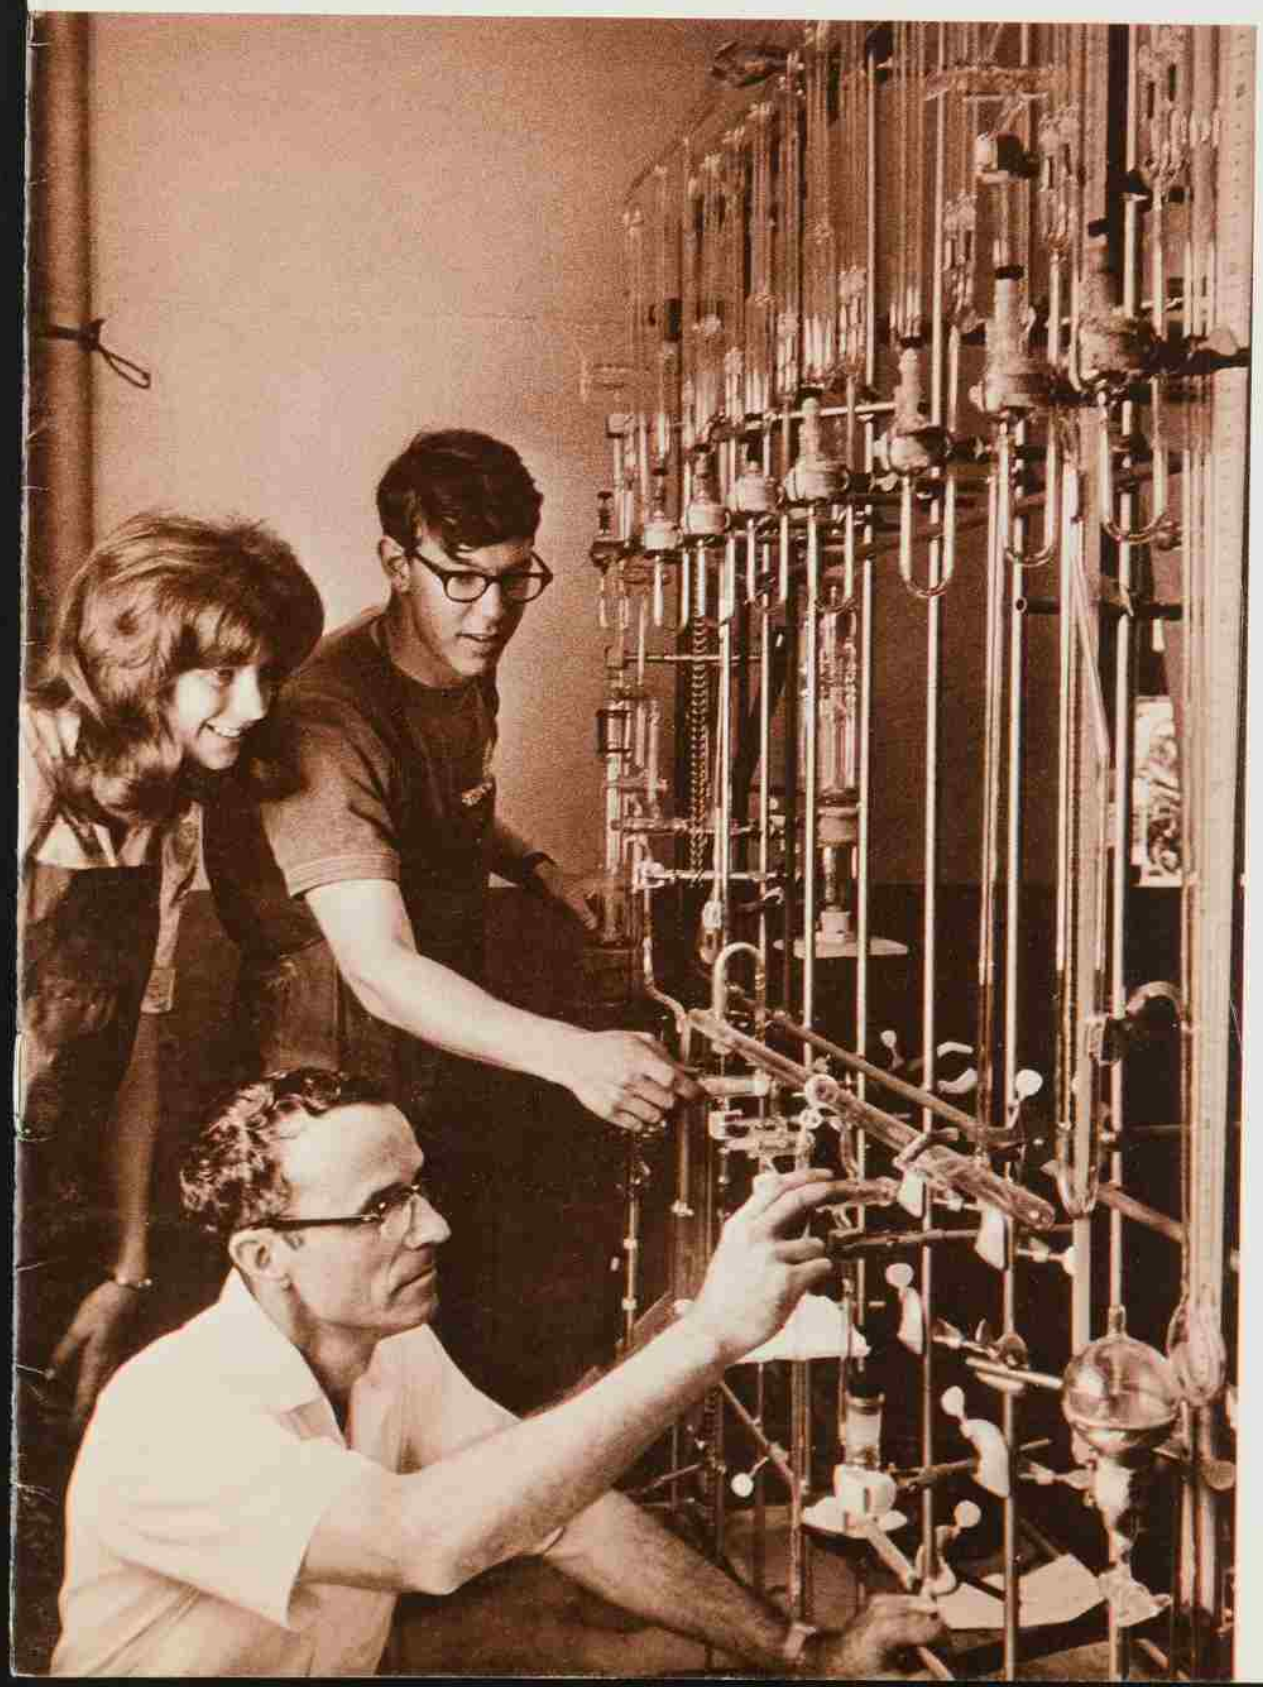
WILLAMETTE ALUMNUS

SUMMER, 1967



CHEMISTRY RESEARCH has provided four Willamette students with Summer jobs. Dr. Paul Duell adjusts the apparatus used by Nancy Detering and Peter Lutz. For a report, see page 3.

Campus CAPSULES

ENROLLMENT is expected to be about 1,450 this Fall with nearly 400 freshman, 25 transfers and 125 first year law students due to arrive Aug. 30 for orientation. The financial aid office reports that about $436,000 in all forms of financial aid will be dispersed to Willamette students in 1967-68 by the University.

SUMMER SESSION enrollment dropped to 41 students and prompted the Board of Governors to suspend summer sessions for a two-year period to allow for a complete study by a faculty committee to determine how the University can best use its facilities during the Summer.

THE GOVERNORS also appointed Dr. E. Jerry Whipple vice-president for Student Affairs, a new position on the staff. Dr. Whipple formerly served as assistant to the president, supervising the alumni and church affairs and student activities. As vice-president he will coordinate the works of all offices dealing with student affairs, including the personnel deans, health service, chaplain's office and financial aid. The University is now seeking a director for the alumni office.

CONVOCATION and chapel policy was reviewed by the Board of Governors and the following main policies were adopted: that required convocations be limited to ten and required chapels to six, plus two religious convocations during Christian Resources Week; that six cuts are permitted; that the penalty for more than six cuts be probation which prevents a student from representing the University in any office or representative capacity; that the Advisory Committee on convocations include the manager as chairman and eight regular members, four students selected by the Student Senate and four faculty members appointed by the University President. The policy was reviewed as a result of action taken this past year by the Student Senate.

QUESTIONNAIRES that went to all alumni are proving to be most helpful to the University. The opportunity to write a frank, open letter to the University prompted the start of the Ply and Reply column on page three. Alumni who haven't returned the questionnaires are encouraged to do so to update records in the Alumni Office.

CHAPLAIN Cal McConnell is back on campus after a year's leave of absence. He received a master of sacred theology degree, cum laude, in May from Andover Newton Theological School.

EXTENSIVE revisions in the University's curriculum brought about a complete revision in the University's catalog which became available in July. The catalog has a new size and layout which facilitate the search for information.

FACULTY and staff appointments this year number 22, including eight new additions, four visiting professors (for those taking sabbaticals this Fall) and ten replacements for former faculty members.

SPRINKLING systems have been installed this Summer in the quadrangle and surrounding area and at the football field. In addition to the normal painting and repairs, the three towers on Eaton Hall have been removed as a precautionary measure.

THE TASK of moving out of the old law school building and into the new Truman Collins Legal Center was begun in July in preparation for nearly 300 law students in September. Details on the dedication of the Legal Center can be found on the back cover.

COMPARATIVE campus grades for the Spring semester show the all-campus average to be 2.679; the all men's average, 2.602; the all women's average, 2.782; the all-sorority average, 2.799; and the all fraternity average 2.656. The top two women's organizations were York House with 2.956 and Pi Beta Phi with 2.924, while the men were led by Kappa Sigma, 2.835, and Sigma Alpha Epsilon, 2.702.

THE WHITE HOUSE
WASHINGTON

TO THE GRADUATING CLASS
WILLAMETTE UNIVERSITY, 1967

It is a pleasure for me to extend my best wishes as you complete your college education.

You are graduating into a society in which you will be warmly welcomed. Our country has never had so great a need for highly educated men and women. Never have young Americans moved from the college campus into a world offering so broad a range of opportunities for individual fulfillment and contribution to the welfare of humanity.

Your generation of students has been distinguished by its fresh and vigorous concern for the quality of American life and its commitment to American democracy. Perhaps the greatest opportunity awaiting you is the challenge to make this a life-long commitment.

Today, Americans from every walk of life are striving together to shape a society that can offer a meaningful and rewarding life to all its members. Never have so many of our countrymen been so deeply dedicated to eradicating the old evils of ignorance, poverty, and bigotry from every corner of the land.

Through your years of study, you have prepared yourselves for positions of leadership in this quest for a better America.

I congratulate you, and urge you to take full advantage of that opportunity.

Sincerely,

Lyndon B. Johnson

WILLAMETTE ALUMNUS

VOLUME XV, NUMBER 1

SUMMER, 1967

Published Quarterly for the former students of Willamette University. Second class postage paid at Salem, Oregon. Return postage guaranteed.

PLY AND REPLY

Alumni ask questions on occasion. Some of the answers may be of general interest, so The Alumnus Magazine is starting this question and answer column to find out what alumni want to know about their University. As many questions and answers as space will allow will be used. The questions should be signed, but names will be withheld upon request. Here are some samples:

We see where Willamette is expending large sums on new facilities. Have similar strides been taken to increase faculty salaries?

In the past 25 years, the period of Willamette's largest physical growth, the average teaching faculty salaries and fringe benefits have increased about 4½ times (from $2,473 to $10,432) while the cost of living index has doubled. (Note: an expanded article on faculty salaries will appear in a future issue of The Alumnus)

In Lawrence Davies' report on Willamette Now in the Fall '65 Alumnus he quoted an administrator as saying "(our students) represent perhaps a more homogeneous group than is found in many private and state schools." Is this still the case, and if so, does Willamette intend to seek a more polygot community of students?

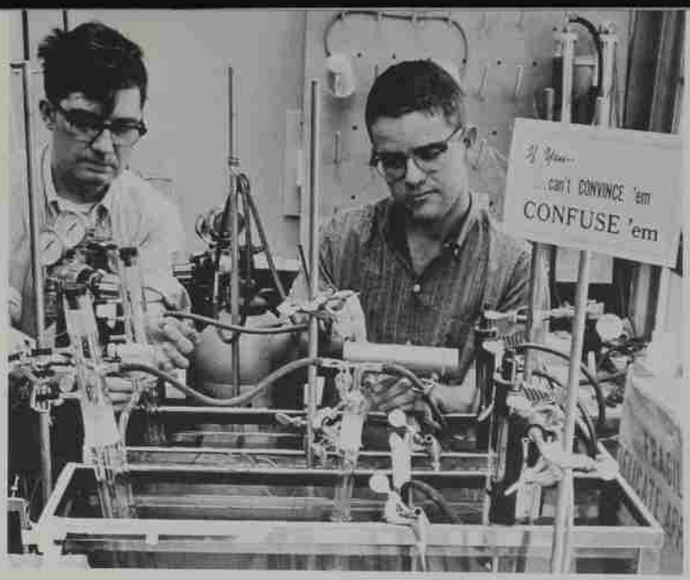
Yes, this is still the case, although we are doing something about it. We have increased, to a limited extent, the number of minority students on the campus, and we are seeking additional qualified students from various religious, racial and cultural groups. The Board of Trustees has decided that Willamette should seek a nationwide student body. We have hired a third man in the Admissions Office to get us started in this direction.

Has Willamette ever considered offering an elementary education program? If not, why not?

The Willamette faculty has considered an elementary education program several times, but has voted down proposals for the following reasons: (1) the many prescribed courses required by Oregon for elementary certification, (2) time and course limitations imposed by the normal four-year course of study leading to a Bachelor of Arts, and (3) the resources that would be necessary to support a staff in elementary education.

Isn't Willamette losing some good students to the state schools because the fees are so much higher?

There are no "hard data" to substantiate the assumption that good students are attending state schools rather than Willamette because of costs, yet, too often there is heard the comment that "We would like to have sent our son or daughter to Willamette, but felt we couldn't afford it." The amount of available financial aid at Willamette for qualified students behooves every interested applicant to permit the financial aid office to consider the student's needs. The difference in total costs for a year at Willamette and a residence at a public university should not be limited to a simple comparison of tuition and fees.



Chemistry Lab Provides Unusual Summer Jobs

Trying to make 7-alkylnorbornanes or studying non-isothermal galvanic cells or preparing coordination compounds aren't ordinary summer jobs for Willamette students. So the National Science Foundation is helping four students have an extraordinary summer in chemical research.

Funds from the Undergraduate Research Participation Program of the NSF, augmented by a grant from the Petroleum Research Fund of the American Chemical Society, have provided stipends for 10 weeks of study under the leadership of three Willamette chemistry professors.

The program, in its fifth summer at Willamette, "is quite a revelation to the students," according to director Dr. Paul Duell. "It exercises their imagination, tests their ideas and challenges them to apply their knowledge of chemistry to certain problems away from the structure of normal course work. In essence, it's a culmination of their course work, and we are very pleased with their performance," he added.

Dr. Duell speaks with some pride, since 17 of the 18 students who have participated in the programs have gone on to graduate school or medical school well grounded in research techniques.

As in previous years, each professor works with one or two students in his particular field of chemistry. For Dr. Duell, this summer his work in inorganic chemistry is with seniors-to-be Nancy Detering and Peter Lutz. They are using some sophisticated apparatus to study the technique of differential thermal analysis and preparation of coordination compounds and their thermal decomposition.

Organic chemistry under Dr. Norman Hudak is keeping Sandy Sevall occupied trying to find a general method to make 7-alkylnorbornanes, substances which can be similar to a wide variety of natural products isolated from nature. Sevall will enter the Ph.D. program in bio-chemistry on a Fellowship to Purdue University in the Fall.

Senior Norm Hunter is working with Dr. Arthur Payton in physical chemistry on the study of non-isothermal galvanic cells to get experimental data on their electromotive forces in order to determine thermodynamic properties of electrolytes. (This is why we said these aren't ordinary summer jobs!)

The three professors have high praise for the program, and the students consider themselves quite fortunate to be involved in the research. Dr. Duell is responsible for getting the NSF funds each year and the students file applications for the four positions each summer which provide a $600 stipend for the full time work.

Accidents Don't Just Happen

Oregon Research Dents Traffic Safety Problems

By DR. NOEL KAESTNER

Fatal traffic accidents don't happen to just anyone. Evidence from several recent Oregon and California studies indicates that certain drivers of the general motoring population have many more than their statistically expected fatal accidents. In general, the research findings show that compared with typical drivers, fatal accident drivers: (1) are significantly younger, (2) have fewer years of driving experience for a given age, (3) are much more likely to be males, (4) have unusually frequent traffic involvements, especially traffic citations, and (5) are particularly likely to have had excessive prior traffic involvements when they are judged "culpable" in the fatal accident.

Female drivers involved in fatal accidents are more likely than their male counterparts to have: (1) no valid license at the time of the fatal accident, (2) fewer years of driving experience than comparable age males, (3) more fatal drivers in the 65 and over age group, and (4) frequent prior traffic accidents on their records.

Maturity a Critical Factor

Even the type of previous traffic violations appear to be pertinent. For example, the male fatal accident drivers not only had an excessive number of speed related violations, but surprisingly all age groups had an excessive number of "miscellaneous equipment" violations and "excessive noise" violations. Because these last two types of traffic citations are ordinarily characteristic of the youngest drivers in the general driving population, but appear above chance expectancy for all age groups of fatal accident drivers, it is conceivable that male drivers involved in fatal accidents share many other traits with the most youthful segment of drivers. Maturity, in fact, may be a critical factor in distinguishing typical drivers from those encountered in the newspaper headlines dealing with highway deaths.

Still other evidence from the fields of driver education and driver improvement supports the contention that sex differences may exist which predispose male and female problem drivers toward different types of driving trouble. Data exist which hint that traffic violations are more influenced by the conscious aspects of the driver's motives whereas there is probably less conscious control over those behaviors leading to accidents. This hypothesis is supported by numerous research efforts on the impact of driver education and driver improvement. Typically these studies reveal appreciable reduction of traffic violations and negligible effects on traffic accidents. Thus, educative and rehabilitative countermeasures primarily influence attitudes (which relate to violations) but not to skills and/or judgment (which relate to accidents). The significance of these relationships is to be found in the fact that females involved in fatal accidents have an especially aberrant prior accident record whereas the males are characterized by excessive traffic violations in the past. It would seem from these comparisons that females involved in fatal accidents are deficient in driving skills and males are more likely to be lacking in healthy attitudes towards driving.

These observations and interpretations should not be construed to mean we are in a position to pin-point the driver who is headed for a fatal traffic accident. The findings noted above are generalizations which characterize the typical driver involved in a fatal accident. The researcher in this field is plagued by the infrequency of even such broad characterizations. The exceptions are the rule. Consider the teen-age driver. He is generally said to account for between two and three times as many accidents as his numbers would warrant. At a recent conference of the American Psychological Association two experts disagreed on the contribution of teen-age drivers to the total accident picture. One stated that the accident picture for young drivers was grossly underestimated and

ONLY the dead driver of this car could have prevented becoming a statistic on a recent weekend summary of road deaths in Oregon. High speed and a sharp curve don't complement each other. It was his third—and final wreck.

DR. NOEL KAESTNER, professor of psychology, has been at Willamette since 1954. For the past seven years he has also served as the consulting research psychologist for the Oregon State Department of Motor Vehicles. His work has been recognized nationally, and he was invited by the Department of Transportation in Washington, D.C., as one of three consultants to recommend ways of implementing the Oregon program in traffic safety on a national basis. He attended a meeting in Washington, D.C. just after writing this article.

that relative to their actual driving exposure they had many more than three times their proportional share of accidents. The other countered that teen-agers drive many more miles than generally recognized (except by Dad, who refills the gas tank) and these miles are accumulated very often during the hours of greatest traffic hazard. He also added that accidents by teen-agers could well be consequences of the early stages of learning driver skills and not necessarily indicative of immaturity.

If the research experts themselves are divided on such a basic question as the role of youthful drivers in the total traffic accident picture, the public may well wonder to what extent traffic accident research is providing useful knowledge from which preventive measures may be developed. Other "truisms" for which research support is not entirely unequivocal include: speed laws, vehicle inspection, high school driver education, and driver improvement.

Interviews Show Promise

It is in this last area, driver improvement, that Oregon has made an important contribution to the national traffic safety program by providing some fairly definitive results on the rehabilitative possibilities of short interviews. The prominence of Oregon in this field is testified to by the prevalent references to the Oregon program in the research literature and at regional and national conferences on traffic safety. The Oregon Department of Motor Vehicles first employed a research consultant on its staff in 1957, one of only two states to take this step at that time. Recently the major financial support has come from the Injury Control Program of the U.S. Public Health Service. In an earlier pilot study employing a non-interviewed control, as well as the usual driver improvement interviewees, only a slight decrease in subsequent traffic citations was noted for the interviewed group relative to the control group. Even less promising results were obtained for ensuing traffic accidents.

As a next step, the Department conducted a nationwide survey which revealed that Oregon's research represented a pioneer effort to scientifically evaluate the therapeutic effects of personal contacts with offending drivers. With the exception of two other states, no research existed nationwide. The little research available was typically discouraging regarding the rehabilitative impact of driver improvement procedures. Apparently, the essential difference between Oregon and most of the other states consisted not of the fact that its program was relatively ineffective, but rather that Oregon was exceptional in suspecting the limitations of the approach.

Accident Rate Reduced

As a result of this self-evaluation, many driver improvement interviews were monitored in an effort to understand the reasons for their failures as therapeutic devices. Lack of uniform procedures, together with assorted interviewer errors, were regarded as contributory factors. In an effort to obviate these defects, a structured interview procedure and special training in its use were devised. In addition to the change in the interview format and interviewer training, a basic change in the rationale regarding driver improvement cases was generated. Rather than emphasize problem drivers as such, the new focus shifted to types of problems drivers have. Several potentially remedial problem areas were delineated. These included: faulty knowledge of traffic laws, lack of self-insight, and unhealthy driving attitudes. Serious debilitating problems such as neurosis, psychosis, and alcoholism, because of their ingrained nature, were not directly dealt with in the very brief

FAILURE to yield the right of way was responsible for this Oregon highway death, one of over 700 recorded last year. This driver escaped a previous fatal wreck, but wasn't so lucky the second time.

contact of the interview. Available referal services were suggested in these extreme cases. Interviewers did devote their attention to the three problem areas mentioned above because they were presumably more amenable to broadly educational and motivational confrontations.

Two years have now elapsed since the implementation of the revised interview procedures. Drivers interviewed have been compared with control group drivers in terms of accidents and citations for comparable intervals. To date interviewees not only are having significantly fewer traffic violations, but also about 50 per cent fewer accidents. The reduction in accident experience is especially noteworthy in view of previous research efforts both in Oregon and nationally. In addition to the absolute reduction in accidents and traffic violations, the interview appears to have a significant delaying effect on traffic involvements when they do occur. On the basis of this study and one other recently reported from New Jersey it appears possible to alter non-verbal driving behavior over a relatively long temporal course by verbal vis-a-vis contact requiring less than one hour.

"Accident" a Misnomer

Earlier, driver improvement was listed along with highway speeds, vehicle inspection, and high school driver education as areas where research has not always been able to point the way with useable certainty. Despite inconclusive and occasional contradictory findings, serious researchers do not deny the significance of these variables. Discrepancies generally do not concern the potential value of driver education, for example. Rather disagreements appear regarding the most practical way of realizing the existing potential of such programs. In fact, one of the researchers' responsibilities is to identify just such lacunae in our storehouse of "truisms." This identification function is particularly relevant in the area of accident research, an area where "established facts" stand as islands in an environment fraught with concepts of accidents varying from "bad luck" to chance occurrences. The very term "accident" could well be a misnomer, and current usage among researchers favors the term "collision" in preference to "accident." As reliable data become available, the "accidental" nature of accidents (and all of its concommitant aura of mysticism and superstition) is becoming increasingly suspect.

In the double role of teacher of research procedures and applied researcher there is the potential of a productive meld of the ultimate promise of research theory and the tempered realization of achievement. Hopefully this awareness of the double demands of applied science is reflected in the Experimental Psychology courses presented in the Psychology Department at Willamette University.

"A YANKEE IN THE HEART OF DIXIE"

This is the name of a radio program which, for five years, has appeared on scores of stations in the Deep South. Who is the Yankee? Edwin T. Randall, who graduated from Willamette in 1922.

BY DEAN POLLOCK

"I've got to set out on a trip to the South in a couple of days and won't be back until nearly June," wrote Edwin T. Randall from Pennsylvania, explaining his absence from the 45th reunion of the class of 1922.

As the M.C. was going over his notes prior to the reunion luncheon, among which were Ed's "regrets", he glanced at a nearby campus group and there, unmistakably, was Ed himself. He'd just flown in from Mississippi, bringing with him a remarkable story that had escaped the notice of the Alumni Office. For years his name had been listed under the "missing persons" category in the alumni files, from which he had been recently rescued by classmate Virginia Mason.

Yankee Peddler, Modern Version

Perhaps "peddler" is too flippant a term for describing the astonishing reception that Mr. Randall has had in Alabama and Mississippi as a purveyor of good will through his program, "A Yankee in the Heart of Dixie." Now, after five years, it is aired daily on 65 radio stations, and weekly on eleven others. It is distributed to the stations on tape in 15-minute segments, and is aired twice a day by some of the participating stations. In nine cities it is used by two separate stations.

The format is easy-going, friendly, very informal and unrehearsed. Mr. Randall is annoyed when his method is described as an "interview". This, he proclaims, it definitely is not. He sits down with his one or several guests and lets them do most of the talking. "I think," he explains, "the very fact that we don't tell people what to say contributes to the warmth of the relationship between the listener and the people on the program. The atmosphere of sincerity is developed to a very high degree."

"Our real objective," says Randall, "is to talk about better education," but this is not a limiting subject. It provides a ready vehicle for wide ranging views and ideas into which the subject of integration quite naturally obtrudes, and is never dodged.

All sorts of people take part in these folksy programs, from people you never heard of up to outstanding leaders in their state and community.

What's Behind These Popular Programs?

What makes them tick? Randall declares he doesn't know. Somehow or other he has touched a responsive chord. Maybe it's because "there is no more exciting entertainment than talking to your own kind of people with their hair down." Probably regional pride has much to do with it—pride in the accomplishments of fellow citizens and in the advancements the South is making in many fields, as well as personal involvement in the South's rich historical and cultural heritage. For example, there is the conversation with the gracious lady who first recognized the talent of Leontine Price, and who provided the means for the musical education that sent her on to become a world renowned opera star.

Randall looks upon his activities simply as a means of enabling people to know more people — all kinds of people — for which, he believes, there is all too little opportunity in the busy world we live in. He thinks radio is uniquely qualified for this task, and that we are just beginning to get to the edge of understanding radio in this light.

"All of this sounds pretty corny," Randall admits, "but it's as close as I can come to explaining why we are in this business at all . . . I hope we can go on together to a deepening trust and faith in each other as human beings."

Do Listeners React?

Apparently yes, to judge from the many expressions of appreciation and gratitude that come from many sources. A newspaper commented, "This Yankee is different . . . he interviews Mississippians of all walks of life, of all backgrounds and interests. What emerges is the portrait of a vibrant Mississippi, a thoughtful Mississippi, or an optimistic Mississippi."

Writes an executive of Alabama Power Company, "You have certainly done much to heal the wounds and spread goodwill and friendship in our part of the country." Another listener says, "It's not staged, but right off the cuff. It seems the negative views make headlines from our part of the country. Thank you for probing our positive side."

Staggering Statistics

The figures are more than a little overwhelming. Mr. Randall's small enterprise distributes more than 10,000 tapes a year to about 350 radio stations, 76 of which use the program as a regular feature, and others occasionally. It has been heard on the Voice of America and on a number of educational stations.

All of this comes out of an organization known as "Friendly World Broadcasting" (which also produces other programs) with headquarters at 122 North Providence Road, Wallingford, Pa. "Friendly World" is supported by voluntary contributions, and its programs are supplied without charge to any station that wants them. There is no commercial sponsorship.

How Topsy Grew

Ideas like this do not arrive full-blown. There has to be some background. This background began at Willamette where Randall was a student headed for the ministry, and, he recalls, he was at various times telegraph editor of the Statesman, janitor of a department store, cook at the Spa, and preached on Sundays. He took his graduate theological training at Garrett Biblical Institute, followed by many years as a pastor.

In 1937 he became convinced that the opportunities inherent in radio were being overlooked by many people who had something to say. He started a local program in Minnesota called "The Country Church of the Air." Later, on CBS, he conducted a commercial program known as "Let's be Friends." Eventually, he became thoroughly addicted to broadcasting, and while traveling in the South he saw an opportunity to make friends, and to impel friends to make friends. "We think people are pretty wonderful," he says. "This amazes us continually and we like to share our astonishments."

Class of 1942

APPROXIMATELY 500 ALUMNI

returned to the campus May 20-21 for commencement weekend activities. Among the special class reunions were those for the classes of 1917 (right) and 1942 (above), celebrating their 50th and 25th anniversaries. A special guest at the '42 reunion was Dr. R. Franklin Thompson (far left), president of the University of Puget Sound and former professor and vice-president at Willamette. The '17 reunion was organized by former class president Alpheus J. Gillette of San Diego. Those present included: Gillette, Mr. and Mrs. James D. Fletcher, Esther Emmel Gillette, Aetna Emmel Olson, Zenas A. Olson, Adelaide Tobie Orange, Violet MacLean, Samuel R. King, Dr. Lloyd R. Haight, Rosamond Gilbert Haight, Eugenia McInturff Pearcy, and Mr. and Mrs. Carl F. Gregg.

Class of 1917

NEW ENGLAND ALUMNI

gathered in May to welcome President Smith to the New England area. Dr. Raymond Fedje, '49, served as master of ceremonies for the occasion which drew 21 alumni and friends to Needham Heights, Mass., to hear Dr. Smith and view the film strip "This is Willamette." Dr. and Mrs. Fedje shared host honors with Mr. and Mrs. Miles Woodworth, '34, of Dover, Mass. Plans are being formulated for another New England gathering in October. Those who attended in May were, seated from left; Pamella Dean, Louise Demeter, John Gary, Maida Gary, Mrs. Adrian Lindsey, Adrian H. Lindsey and Darlene Dunham. Standing, Chuck Flynn, Heather Flynn, David Demeter, Marilyn Miller, Bill Grahara, Barbara Roger Graham, Mary McConnell, Calvin McConnell, Betty Fedje, Dr. Smith, Dr. Fedje, Mrs. Howard B. Somers, Kathryn Woodworth, Miles Woodworth and Tom Dunham.

Class Notes

'09

JOHN C. JOHNSON lives on a small fruit farm near Goshen, south of Eugene, Oregon. He retired in 1950 after teaching for 40 years. His address is Rt. 4, Box 118, Eugene, Oregon.

'16

LAURA ROSS formerly did fashion advertising for women's wearing apparel, accessories and shoes. She retired in December 1966 and is now residing at 2540 Alvarado Terrace, Salem, Oregon.

HAZEL SMITH MARSH resides at 762 W. Wharton, Roseburg, Oregon. Her granddaughter, Judith Marsh was chosen as a recipient of Girl's State Award to attend the Girl's State meeting held on the Willamette campus in June.

'19

CAROLYN STERLING received the first honorary degree in the history of Wenatchee Valley College. She has served as secretary to the Wenatchee School District for 46 years. Miss Sterling resides at 813 Monroe St., Wenatchee, Washington.

'20

EVA PARRETT KLEIN was honored at a luncheon at Portland State College in March as a past president of Oregon State Welfare Association. Her address is 6004 NE Sacramento St., Portland, Oregon.

'22

RALPH REHBOCK completed 40 years this spring as teacher and counselor with the Seattle schools. He still likes to travel and last summer with Mrs. Rehbock toured Russia, Poland and the Scandanavian countries. He resides at 16316 Inglewood Place, Bothell, Washington.

S. MARIE CORNER is enjoying living in retirement at Wesley Gardens. Her address is 301 Wesley Gardens, Des Moines, Washington.

'24

EVA LEDBETTER MILLER has retired as director of dormitories and assistant professor of foods and nutrition at Eastern Oregon College. This will mark the completion of 36 years of teaching and supervision of food services. In addition to her teaching, Mrs. Miller has served as Home Economist for Washington State Extension Service and as a drapery designer for a store in Salem. Her address is 702 "N" Ave., La Grande, Oregon.

ANN LAVENDER RAMQUIST is still living in Vashon, Washington — P.O. Box 396. Her husband sells real estate there.

'25

CARMELITA BARQUIST was named Oregon's outstanding biology teacher at the annual conference of the Oregon Biology Teachers Association in April. Miss Barquist has been teaching biology in the Salem School District for the past 40 years. Her address is 1395 Mission St., Salem, Oregon.

JENNELLE VANDEVORT MOORHEAD will direct two seminars in Quito, Ecuador during the summer at the invitation of the Ecuador Ministry of Education and as part of the University of Oregon summer session. Last fall, she was elected to the Executive Committee of the US Commission for UNESCO. Address is 2683 Potter St., Eugene, Oregon.

'26

MARJORIE BROWN BECHTLE resides at 4506 Davenport Ave., Oakland, California. She is working at Capwell's — one of Oakland's finer stores.

MILDRED TUCKER DUNCAN is teaching 3rd grade in Mossyrock, Washington.

MABEL FLOCK LARRISON is teaching 5th grade at the Latona Elementary School in Seattle, Washington and resides at 1420 N. 48th St.

'27

LETHA MILLER LANDIS resides at 5507 South 6th, Klamath Falls, Oregon and is teaching the 7th grade at Altamont Junior High School.

'28

JOY HILLS GUBSER received an award of Distinguished Service from the University of Oregon recently. She is assistant state superintendent of public instruction and has been with the State Department of Education for the past 19 years. Her address is Rt. 1, Box 472, Salem, Oregon.

BEACH PATTON resides at 804 10th St., Hood River, Oregon and is now completing his 24th year with the Hood River schools.

'30

LETA HALE ROEHL and her husband are planning to make a tour of Europe this spring. They will visit England, Holland, Germany, France, Austria, Italy and Switzerland. She resides at 412 S. 12th St., Coeur D'Alene, Idaho.

'31

A. LARS NELSON resides at 336 N. 149th St., Seattle, Washington. He is a member of the Federal Farm Credit Board. It is a six year appointment by the President.

'32

PERRY N. SPELBRINK is teaching chemistry at South Salem High School and resides at 2828 74th Ave. SE, Salem, Oregon.

For the past four years, HAYES BEALL has been Director of Peace Corps Projects for The Cooperative League of the U.S.A. This provides technical and professional direction for Peace Corps Volunteers working with cooperatives. The projects are in five countries, namely, Panama, Colombia, Peru, Kenya and India. Mrs. Beal (SARAH JANE DARK '32) has been teaching the past 7 years in the Lombard school system. She is also working toward her M.A. in elementary education at National College of Education in Evanston, Ill. Their address is 103 W. Greenfield Ave., Lombard, Illinois.

'35

VINCENT S. CARTER and his wife, Marjorie, reside at 12235 SW Douglas, Portland, Oregon. He has been with Sandberg Manufacturing Co. for the past 31 years.

DR. FREDERICK P. HARRIS has been appointed professor and chairman of the philosophy department at Oregon State University. Dr. Harris was headmaster of the American School in Tokyo, Japan from 1957 to 1966 and visiting professor of philosophy at Lewis and Clark College this past year. He received Fulbright awards in 1955-57 and was a Danforth Foundation Assoc. in 1953-55. His current address is 3050 SW Ridgewood Rd., Portland, Oregon.

'36

AGNES CORTHELL POTSDAM is case work supervisor and field instructor for the Multnomah County Juvenile Court. She resides at 3033 SE 85th Ave., Portland, Oregon.

'37

HELEN PETERSON MINTER is now working for the Hayward Unified School District. Her daughter, Margaret, was recently married and her son, Jim, is in the Navy on the USS Ashtabula. Helen resides at 14795 Wake Ave., San Leandro, California.

'38

JOHN P. VOSS is executive secretary of the American Association for Arts and Sciences in Boston. He lives at Garfield Road, Concord, Mass.

DR. ARTHUR S. MILLER has completed the manuscript for "The Supreme Court and American Capitalism" which is to be published by The Free Press. He is on sabbatical leave from George Washington University Law School next year to work on a book on the constitutional theory of the large business corporation. His address is 3202 Reservoir Rd. NW, Washington, D.C.

'39

MARIAN STEIGERWALD MURPHY and her husband have just opened a new furniture showroom in Pioneer Square, Seattle. Their oldest son, Steve is attending Harvard Graduate School. Another son, Terrance graduated from the University of Washington in June. Their daughter, Pam, will attend Washington State University this fall. The Murphys reside at 4820 NE 43rd St., Seattle, Washington.

'41

Mr. and Mrs. JAMES ANDERSON (MARGARET TAYLOR '39) reside at Rt. 9W, Palisades, New York. Margaret received her MA in Guidance and Student Personnel at Columbia University this spring.

Mr. and Mrs. GILBERT HEALD (BETTY SACKETT '43) reside at 12120 SE Foster Place, Portland, Oregon. Gib is still with Acacia Mutual and Betty is circulation librarian at Reed College. Their four sons will all be in college this fall.

CAPT. R. B. McNEES is professor of naval science at the University of Washington and resides at 3704 NE 188th St., Lake Forest Park, Washington.

WILLIAM H. KILKENNY has been elected executive vice president of Hyster Company.
